Jeziki / Languages:	Predavanja / Lectures:	angleščina ali slovenščina/English or Slovene
	Vaje / Tutorial:	angleščina ali slovenščina English or Slovene

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik.

Enrollment in the study year.

Vsebina:

Predavanja:

- Digitalne komunikacije med multimedijskimi napravami: terminali, video in avdio napravami, senzorji in aktuatorji.
- Digitalni multimedijijski signali, informacija in podatkovni pretok
- Omejitve fizikalnega komunikacijskega kanala pri prenosu električnih signalov, prenosna kapaciteta komunikacijskega kanala
- Obdelava signalov za prenos po komunikacijskem kanalu:
 - kodiranje signalov
 - digitalni modulacijski postopki
 - sodostop do skupnega komunikacijskega medija
- Digitalni prenosni sistemi za povezovanje prenosnih multimedijskih naprav na kratkih razdaljah : BAN, PAN, WLAN.
- Pregled in primerjava aktualnih brezžičnih tehnologij v praksi glede na topologijo omrežij, doseg, podatkovni pretok in porabo energije.

Vaje:

- Eksperimenti z uporabo sodobnih programskih orodij za modeliranje digitalnih prenosnih sistemov.
- Laboratorijski prikaz delovanja osnovnih gradnikov digitalnih prenosnih sistemov.
- Meritve digitalnih signalov in lastnosti prenosnih sistemov

Content (Syllabus outline):

Lectures:

- Digital communication between multimedia devices: terminals, video and audio devices, sensors and actuators.
- The digital multimedia signals, information and data rate
- Limitations of physical communication channel for the transmission of electrical signals, the transmission capacity of the communication channel
- Signal processing for transmission over the communication channel:
 - signal coding
 - digital modulation methods
 - multiple access to a common medium
- Digital transmission systems for connecting portable multimedia devices over short distances: BAN, PAN, WLAN.
- Overview and comparison of current wireless technologies in practice, depending on the network topology, range, data rate and energy consumption.

Lab work:

- Experiments by using software tools for modeling digital transmission systems.
- Laboratory demonstration of basic building blocks in digital transmission systems.
- Measurements of digital signals and characteristics of the transmission system
- Experiments with multimedia communication devices.

- Eksperimenti z multimedijskimi komunikacijskimi napravami.

Temeljna literatura in viri / Readings:

1. Bhatnagar, Gaurav. Introduction to multimedia systems. Academic Press, 2002.
2. Sašo Tomažič, Digitalne komunikacije, Založba FE, 2014.
3. Andy Bateman, Digital Communications: Design for the Real Word, Addison Wesley, 1999.
4. Da Silva, Mário Marques. Multimedia communications and networking. CRC Press, 2012.
5. Rao, Kamisetty Ramamohan, Zoran S. Bojkovic, and Bojan M. Bakmaz. Wireless multimedia communication systems: design, analysis, and implementation. CRC Press, 2017.

Cilji in kompetence:

- Razumevanje omejitve pri prenosu digitalnih signalov po fizičnem prenosnem kanalu.
- Poznavanje parametrov za oceno kvalitete pri prenosu multimedijskih signalov po komunikacijskem kanalu.
- Poznavanje komunikacijskih tehnologij, ki omogočajo povezljivost multimedijskih naprav.
- Poznavanje komunikacijskih protokolov, ki omogočajo povezljivost multimedijskih naprav.

Objectives and competences:

- Understanding the restrictions on the transfer of digital signals on the physical transmission channel.
- Understanding the parameters for the evaluation of the transmission quality of multimedia signals over the communication channel.
- Knowledge on communication technologies that enable connectivity multimedia devices.
- Knowledge on communication protocols that enable inter-connectivity of multimedia devices.

Predvideni študijski rezultati:

Po uspešno opravljenem modulu naj bi bili študenti zmožni:

- razložiti delovanje gradnikov v verigi povezav fizičnega sloja,
- računati podatkovne pretoke multimedijskih signalov in prenosne zmogljivosti povezav,

Intended learning outcomes:

After successful completion of the course, students should be able to:

- explain the functionality of the building blocks in the link chain on the physical layer,
- calculate the data flows of multimedia signals and communication channel capacities,

<ul style="list-style-type: none"> - analizirati lastnosti različnih prenosnih tehnologij, - izmeriti lastnosti multimedijskih signalov in komunikacijskih povezav, - povezati multimedijijske naprave v komunikacijsko omrežje. 	<ul style="list-style-type: none"> - analyze the properties of different transmission technologies, - measure the properties of multimedia signals and communication links, - interconnect multimedia devices into the communication network.
---	--

Metode poučevanja in učenja:

Predavanja, na katerih se študent seznaní s teoretičnimi osnovami, in laboratorijske vaje, kjer nekaj problemov spozna tudi praktično in jih skuša v duhu timskega dela reševati.

Learning and teaching methods:

Lectures in which the student is acquainted with the theoretical basics and lab work where the student meets the practical problems and solves them in the team.

Delež (v %) /

5. M. Tkalcic, B. de Carolis, M. de Gemmis, A. Odić, A. Košir: Emotions and Personality in Personalized Services, Springer 2016 (in print).

Cilji in kompetence:

Cilj predmeta je podati znanje o uporabniku prilagojeno komunikacijo med uporabnikom in komunikacijskimi storitvami ter pametnimi sistemi. Predmet vključuje kontekstualizacijo komunikacije in umetno socialno inteligenco v komunikaciji med uporabnikom in obravnavanim sistemom.

Predmet podaja osnove, principe, postopke in vodila v načrtovanju, analizi in ovrednotenju uporabniku prilagojene komunikacije. Pridobljeno znanje je podlaga za načrtovanje, implementacijo

Objectives and competences:

The goal of the course is to familiarize students with a comprehensive insight into the user adapted communication. This course include contextualization of communication and artificial social intelligence in user (human) to (smart) system communication.

The course gives the basic knowledge on principles, approaches and guidelines in design,

in testiranje komunikacijskih sistemov med uporabniki in pametnimi napravami.

analysis and evaluation of user adapted communication. The knowledge is fundamental in development of personalised, contextualized socially intelligent communication systems.

Predvideni študijski rezultati:

Po uspešno opravljenem modulu naj bi bili študenti zmožni:

- Določiti segmente uporabnikov in person v komunikacijski
- Načrtati dialog z upoštevanjem domenskih znanj na področju
- Določiti relevantne kontekste in socialne signale v komunikaciji in ovrednotiti uspešnost njihovega določanja
- Izbrati in ovrednotiti komunikacijske modalnosti
- Načrtati in ovrednotiti zajem podatkov o uporabniku v in izven realnega časa (senzorji, instrumenti)
- Načrtati in implementirati poskuse z uporabniki
- Ovrednotiti kvaliteto uporabniku prilagojene komunikacije

Intended learning outcomes:

After successful completion of the course, students should be able to:

- Determine user segments and personas in user adapted communication
- Use domain knowledge in a communication dialogue design
- Determine relevant contexts and social signals in communication and evaluate the success rate of its extraction
- Select and evaluate communication modalities
- Design and evaluate user data acquisition procedures in real time and off-line (sensors, instruments)
- Design and implement user experiments
- Evaluate the quality of user adapted communication

Metode poučevanja in učenja:

Na predavanjih so predstavljene teoretične osnove obravnavanih poglavij skupaj s prikazom rešitev enostavnih praktičnih primerov. Študentom je na voljo študijski material s podrobno vsebino.

Praktično delo poteka v okviru laboratorijskih vaj in domačih nalog. Vključuje načrtovanje, izdelavo in ovrednotenje konkretnih rešitev uporabniku prilagojene komunikacije

Learning and teaching methods:

The lectures provide a theoretical background on particular subjects together with presentation of simple practical examples. A complete study material is available to the students.

Practical work is being performed in the laboratory environment and home work. It includes design, implementation and evaluation of solutions of user adapted communication.

Delež (v %) /

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik.	Enrollment in the study year.
----------------	-------------------------------

Vsebina: **Content (Syllabus outline):**

Predmet podaja znanja, ki so potrebna za razumevanje elementov in tehnik prenosa multimedijskih vsebin. Študente seznavi z osnovnimi karakteristikami in zahtevami multimedijskega prometa ter pojasni in utemelji kriterije izbire ustreznega prenosnega sistema za posamezne tipe multimedijskih vsebin.

- Definicija multimedijskih pretokov.
- Kodeki in vsebniki multimedijskih vsebin
- Prenos multimedijskih vsebin od izvora do ponora.
- Omrežja in protokoli za prenos multimedijskih vsebin.
- Zaseganje in deljenje virov prenosnega omrežja.
- Tehnike posredovanja multimedijskih pretokov.
- Lastnosti in značilnosti prometnih karakteristik multimedijskih pretokov.
- Mehanizmi za prenos multimedijskih vsebin v operatorskih in ne-operatorskih okoljih
- Tehnike upravljanja multimedijskega prometa: teorija čakalnih vrst, prometni inženiring.
- Prenosne zahteve multimedijskih storitev in pretokov ter načini njihovega prenosa: tipi storitev, najpomembnejši prenosni parametri, interaktivnost in prenos v realnem času.
- Problemi pri prenosu multimedijskih vsebin in zagotavljanja ustreznih prenosnih pogojev.
- Zaščitni mehanizmi za dostop do multimedijskih vsebin (DRM, CAS)
- Zagotavljanje kakovosti storitve: definicije, osnovni principi, standardi, parametri, mere.
- Načrtovanje in izbira prenosnega sistema.

The course provides the knowledge necessary for understanding the elements and techniques of transfer of multimedia content. Students are acquainted with the basic characteristics and requirements of multimedia traffic and with the selection criteria of the transmission system for individual types of multimedia content.

- Definition of multimedia content and flows.
- Codecs and multimedia containers
- Transfer of multimedia content from the source to the destination.
- Networks and protocols for the transfer of multimedia content.
- Transfer network resource access and sharing.
- Forwarding of multimedia data.
- Properties and characteristic of multimedia traffic.
- Mechanisms for the multimedia content transfer in the operator and user environments
- Techniques of multimedia traffic engineering.
- Transfer demands of multimedia flows and methods of its transfer: the most important transfer parameters, interactivity, real real-time transfer.
- Problems with multimedia content transfer and the assurance of adequate transfer conditions.
- Quality of service assurance: definitions, fundamental principles, standards, parameters, measures.
- Security mechanisms multimedia content transfer (DRM CAS)
- Planning and selection of the transfer system

Temeljna literatura in viri / Readings:

2. Andrew S. Tanenbaum, Computer networks, Prentice Hall, 891 str., ISBN 0-13-038488-7
3. Shrinavas Vegesna, IP Quality of Service, Cisco Press, 343 str., ISBN 1-57870-116-3

Cilji in kompetence:

Objectives and competences:

Glavni cilj predmeta je podati celostno sliko procesa prenosa multimedijskih vsebin.
Kompetence, ki jih bodo študenti pridobili:

- Razumevanje postopka tvorbe in lastnosti prometa multimedijskih vsebin, soodvisnosti elementov prenosnega sistema in principov zagotavljanja ustreznih prenosnih pogojev.
- Razumevanje vloge prenosnega sistema, povezovanje teorije in praktičnih problemov, sposobnost ovrednotenja ustreznosti izdelanih rešitev.
- Razumevanje mehanizmov prenosa multimedijskih vsebin in storitev v operatorskih in neoperatorskih sistemih kot so IPTV, radiodifuzija ter v okviru spletnih in mobilnih multimedijskih storitev.
- Samostojno delo na področju prenosa multimedijskih vsebin in upravljanju njihovega prometa.
- Načrtovanje in izbira ustreznih prenosnih sistemov.

The main objective of the course is to provide a comprehensive overview of the process of multimedia content transfer.
Competencies that students will gain include:

- Understanding the process of multimedia content creation, the characteristics of the multimedia traffic, the interdependence of the elements of the transmission system and the principles for providing proper transmission conditions.
- Understanding the role of the transmission system, linking the theory with the practical issues; the ability for the evaluation of the designed solutions.
- Understanding the mechanisms of multimedia content and service transfer in the operator and non-operator systems such as IPTV, broadcasting and online and mobile multimedia services.
- Individual work on multimedia content transfer and traffic management.

Predvideni študijski rezultati:

Po uspešno opravljenem modulu naj bi bili študenti zmožni:

- razumeti osnove vseh prvin prenosa multimedijskih vsebin,
- pojasniti osnovne prometne karakteristike multimedijskih pretokov,
- opisati osnovne elemente prenosnega sistema,
- analizirati lastnosti, parametre in delovanje prenosnega sistema,
- uporabiti osnovne principe za zagotavljanje ustreznih pogojev pri prenosu multimedijskih vsebin,
- izbrati primeren prenosni sistem za prenos multimedijskih vsebin z želeno stopnjo kakovosti storitve.

Intended learning outcomes:

After successful completion of the course, students should be able to:

- understand the fundaments of multimedia content transfer,
- explain the fundamental traffic characteristics of multimedia flows,
- describe the basic elements of transfer system,
- analyse properties, parameters, and operation of the transfer system,
- implement fundamental principles for the assurance of adequate conditions for multimedia content transfer,
- selection of appropriate transfer systems for multimedia content transfer with the desired level of quality of service.

Cilji in kompetence:

Cilj predmeta je študentom podati splošen vpogled v multimedijiske senzorske sisteme, ki je potreben za bodoče inženirje multimedije. Cilje je predstaviti senzorje in senzorske sisteme kot tehnološko osnovo za pridobivanje podatkov o uporabniku in okolici.

Snov je zanimiva za vse študente multimedije z željo po razvoju kompetenc, ki vključujejo učinkovito uporabo multimedijskih senzorskih sistemov in omogočanje interakcije z uporabnikom in okolico.

Objectives and competences:

The objective of the course is to provide students with a general insight into the topic of sensors and multimedia sensor systems, required for future multimedia engineers. The course aims to present sensors and sensor systems as a technological basis for obtaining information about the user and the environment. The content is of interest for all students of multimedia having the desire to develop competences, which include efficient use of multimedia sensor systems and enabling user-environment interaction.

Predvideni študijski rezultati:

Študentje opredelijo osnove načrtovanja, delovanja in uporabe multimedijskih senzorskih sistemov. Povežejo teoretična znanja s praktičnimi izvivi o principih zajema, prenosa, obdelave in združevanja multimedijskih vsebin. Naučijo se uporabljati multimedijiske senzorske sisteme za spremljanje uporabnika in okolice.

Intended learning outcomes:

Students define the basics of design, operation and use of multimedia sensor systems. They associate the obtained theoretical knowledge with practical challenges and principles of capturing, transmitting, processing and merging multimedia content. They learn to use multimedia sensor systems to track and monitor the user and the

Poiskajo ustreerne načine uporabe multimedijskih senzorskih sistemov za različne končne aplikacije. Sestavijo in osposobijo senzorske sisteme za delovanje v realnem času. Ocenijo ustreznost delovanja sestavljenih sistemov. Presojajo različne koncepte, ki so tipični za sodobne senzorske sisteme, vključno s prenosom, obdelavo, optimizacijo in zagotavljanjem varnosti in zasebnosti.

environment. They find suitable ways to use multimedia sensor systems for various applications. They develop multimedia sensor systems for real-time operation. They test the performance of different multimedia sensor system. They evaluate different concepts that are typical of sensor systems, including transmission, processing, optimization, security and privacy.

Metode poučevanja in učenja:

Na predavanjih predstavimo teoretične osnove obravnavane vsebine. Teoretični diskurz sproti podrobno dopolnjujemo s predstavitvijo različnih praktičnih rešitev. Spodbudimo kritično analizo in oceno predstavljenih rešitev.

Na koncu obravnave vsakega sklopa predstavimo tudi praktični učni primer, ki se mu študentje nato detajljno posvetijo v sklopu laboratorijskih vaj. Študentom je na voljo študijski material s podrobno vsebino.

Praktično delo poteka v okviru laboratorijskih vaj. V prvem delu se študentje postopoma seznanijo z uporabljenimi senzorji in programskim okoljem in kodo, ki jo imajo na voljo. Študentje nato pristopijo k sestavljanju končne rešitve za predpisani problem. Študentje delajo v skupini, ki šteje največ tri študente. Med izvajanjem vaj pa se študentje konzultirajo z asistentom.

V drugem delu vaj študente spodbudimo k praktični uporabi pridobljenega znanja za reševanje konkretnega izbranega problema v obliki projektne naloge. Na projektni nalogi delajo študentje v skupini, ki šteje največ tri študente. Izdelava projektne naloge poteka ob sprotnih rednih konzultacijah s pedagogom.

Ob koncu semestra študentje demonstrirajo delovanje izdelanega senzorskega sistema in poročajo o končnih rezultatih z morebitno primerjavo izsledkov iz literature.

Learning and teaching methods:

The lectures provide a theoretical background of the discussed chapters. The theoretical discourse is continuously updated with the presentation of various practical solutions. A critical analysis and assessment of the presented solutions is encouraged. At the end of each chapter discussion, a practical learning example is presented, which is to be solved during laboratory exercises. Students are provided with detailed study material.

In the first part of the laboratory exercises, students gradually learn how to use the dedicated sensors and the software environment. Students then assemble and deploy a working solution to the problem.

Students work on the problem in a group. The maximum number of students participating in one group in three. During the laboratory exercise, students consult with the teaching assistant.

In the second part of the laboratory exercises, students are encouraged to use the acquired knowledge in a practical way - to solve a specific problem in the form of a project task. Here again students work in groups of maximum three participants. The project task is carried out during regular consultations with teachers.

At the end of the semester, students demonstrate the operation of the designed sensor system and report their final results with a possible literature comparison.

Delež (v %) /

Načini ocenjevanja:

Weight (in %) Assessment:

Način: laboratorijske vaje, projektna naloga, ustni izpit.		Type: laboratory exercise, project task, oral exam.
Ocena 5 je negativna ocena, ocene od vključno 6 do 10 so pozitivne.		Negative grade is 5, positive grades are from 6 to 10.
Pozitivna ocena laboratorijskih vaj je pogoj za pristop k izpitu.		Positive evaluation of work during the laboratory exercises is a prerequisite for the exam.
Prispevki k oceni:		Contributions to final grade:
projektno delo	50%	project task
ustni izpit	50%	oral exam

7. MOLLERUP Per, Wayshowing, Lars Müller Publishers, 2008
8. LUPTON Elen, Graphic Design: The New Basics, Princeton Architectural Press; 2008

Cilji in kompetence:

Osnovni cilj je pokazati znanja in veščine grafičnega oblikovanja za tiskane in digitalne medije, ki v sodobnem načinu komunikacije ne more mimo vseh segmentov družbenega ustroja.

Specifične kompetence:

- sposobnost razvijanja prenosa vsebin iz enega izrazoslovja v drugega.
- sposobnost samostojnega, skupinskega, projektnega in raziskovalnega dela.
- uporabiti metodologije dela v redakciji in spremljanje faz nastanka založniškega izdelka
- sposobnost uporabe temeljev fotografskega, ilustratorskega in tipografskega znanja
- sposobnost uporabe različnih analognih in digitalnih grafičnih orodij za pripravo sporočila
- sposobnost ustvarjati nove ideje

Objectives and competences:

The main objective is to show the knowledge and skills of graphic design in printed and digital media which are inevitably connected with every segment of social structure within the contemporary ways of communication.

Specific competences:

Students:

- are able to transform the contents of one way of communication into another (i. e. from verbal to visual, from audio to video, etc.);
- work individually or in groups in developing project or research work;
- use the methodology of editorial work and get to know the phases in creating a publishing product;
- learn how to use photographic, illustrative and typographical knowledge;
- learn how to use different analogical and digital graphic tools;

- sposobnost vrednotenja videnega v skladu z likovno in oblikovalsko teorijo
 - uporabiti metodologije oblikovanja od analize, definicije problema in ciljev, zasnove idejnega projekta, predstavitev ter izvedbe.

- are able to generate new ideas;
 - are able to evaluate what they see in accordance with art and design theory;
 - use the methodology of design, starting from analysis, to the definition of the problem, goals, concept phase, presentation and realization.

Predvideni študijski rezultati:

Znanje in razumevanje:

Prepoznavanje in povezovanje področij vizualnega sporočanja. Združevanje v timu z namenom povezovanja različnih strok, ki so potrebne za nastanek izdelka vidnih sporočil. Preizkusiti redakcijsko delo. Uporaba posameznih elemetov vizualnega komuniciranja.

Intended learning outcomes:

Knowledge and understanding:

Students recognize and connect different fields of visual communication. Students work in teams with the aim of combining all the professions needed to produce a visual product.

Students experience editorial work and perceive the usage of different elements of visual communication.

Metode poučevanja in učenja:

Tematska predavanja in pogovori na konkretno temo. Vaje in seminarske naloge. Praktično usposabljanje v založniškem timu. Konzultacije. Izvajanje nalog in njih predstavitev- nastop pred avditorijem. Delo v timu in posamezno. Skupinski in samostojni obiski kulturnih prireditev (koncerti, razstave, predavanja gostujočih, domačih in tujih strokovnjakov).

Learning and teaching methods:

Class oral presentations and discussions on particular issues. Seminars and practice. Practical editorial team work. Consultations. Individual or group project work and presentation of the work. Group and individual visits to cultural events (concerts, exhibitions, lectures of visiting Slovene and foreign professors and experts).

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Študent izdelal šest nalog in jih predstavi pred avditorijem, odgovarja na vprašanja ob komentarjih na njegovo predstavitev, se vključuje v odprto diskusijo ob predstavitevah drugih nalog, pripravi končno izpitno naložbo in jo predstavi. Ocenjevalna lestvica: 5-10 (6-10 pozitivno, 5 negativno).	Ocena nalog 50%, verbalna predstavitev 30%, vključevanje v diskusije 20%. Evaluation of the project works (50%),	Type (examination, oral, coursework, project): Students produce six project works and present them to the auditorium, answer questions and comments on their work, take active part in open discussions on other works, work at the final (exam) project and present it in class.
--	---	--

	verbal presentation (30%), active part in discussions (20%).	Evaluation scale from 6-10 (pass) and 5 (failed).

	Vaje / Tutorial: slovenščina ali angleščina Slovene or English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik.	Regular enrolment.
----------------	--------------------

Vsebina:

1. Uvod v ambietno inteligenco: principi; pristopi; v mestitev v področje multimedije; terminologija; definicije
2. Ambient v kontekstu percepce in kreacije multimedijskih vsebin
3. Ambientna inteligencia: v senavzoče tehnologije v odnosu do uporabnika: aplikacija multimedijskih tehnologij v različnih pametnih okoljih; razumevanje razvoja mentalnega modela uporabnika v intelligentnih okoljih
4. Določanje konteksta: določanje kaj je relevanten kontekst za dano aktivnost; določitev potrebnih senzorjev in informacijskih virov; obdelava; komunikacija
5. Tehnologije, ki uporabniku omogočajo aktivnosti v izbranih kontekstih: vseprisotno računalništvo; vgrajeni sistemi; senzorji; IKT tehnologije
6. Uporabnik: interakcija z okoljem; razvoj mentalnega modela, modalnosti, kanali
7. Komunikacija človek-ambient: vmesniki; vhodno-izhodne naprave; zajem podatkov o uporabniku in okolini; modalnosti; personalizacija; povezljivost
8. Kontekstno odvisno računanje, kontekst in vzorci obnašanja uporabnikov
9. Uporaba v multimedijskih storitvah: varnost in zasebnost v intelligentnih okoljih
10. Raziskovalno delo na izbranih aplikativnih področjih: dom; zabava; učenje; profesionalna okolja; različne skupine uporabnikov; analiza in določitev zahtev
11. Praktično delo: načrtovanje intelligentnega okolja za izbrani problem; uporaba tehnik za načrtovanje interakcije; predstavitev prototipa uporabniške interakcije s sistemom; ovrednotenje rešitev

Content (Syllabus outline):

1. Introduction to ambient intelligence: principles; related fields; terminology; definitions
2. Ambient in the context of perception and creation of multimedia content
3. Ambient intelligence: pervasive technologies in relation to user: multimedia technology applications in variety of intelligent environments; understanding user's mental model development in intelligent environments
4. Context definition: context definition for selected activity; selection of relevant sensors and information sources; processing; networking
5. Technologies enabling user's activities in selected contexts: pervasive computing; embedded systems; sensors; ICT technologies
6. User: interaction with environment; mental model development; modalities; channels
7. Communication human-ambient: interfaces; input/output devices; user and ambient sensing; modalities; personalization; connectivity
8. Context dependent computing: context and user behaviour
9. Applications in multimedia services: security and privacy in intelligent environments
10. Research activities on selected application domains: home; entertainment; learning; professional environments; analysis and requirements definition
11. Practical work: designing intelligent environment for selected domain; interaction design tools; interaction prototype demonstration; assessment

Temeljni literatura in viri / Readings:

1. Aghajan, Hamid, Juan Carlos Augusto, and Ramón López-Cózar Delgado, eds. Human-centric interfaces for ambient intelligence. Academic Press, 2009. (izbrana poglavja)

Cilji in kompetence:

Spozнати пomen ambientne inteligence v multimediji ter aktivno uporabljati pridobljeno znanje za razvoj samostojnih rešitev.
Razumevanje ambientne inteligence v sodobnih multimedijskih sistemih v odnosu do uporabnika.
Obvladovati podatkovno pot od senzorja do rezultatov ambientne inteligence.
Poznavanje konceptov in gradnikov arhitektur ambietne inteligence. Razumevanje vloge vsenavzoče tehnologije in uporabo v sodobnih storitvah.

Objectives and competences:

The goal is to understand roles of ambient intelligence in multimedia and apply acquired competences for designing solutions.
Understanding ambient intelligence in modern multimedia systems with relation to users.
Managing data path from sensor to resulting ambient intelligence.
Mastering concepts and building blocks of ambient intelligence. Understanding roles of pervasive technologies and their applications in modern services.

Predvideni študijski rezultati:

Po uspešno opravljenem modulu naj bi bili študenti zmožni:
Primerjati komunikacijsko-informacijske in multimedijiske tehnologije ter njihovo uporabo v različnih pametnih okoljih.
Aplicirati tehnologije ambietne inteligence v interakciji z uporabnikom.
Obravnavati ergonomijo v širšem kontekstu.
Razlikovati omejitve podajanja informacije z uporabo različnih modalnosti.

Intended learning outcomes:

After successful completion of the course, students should be able to:
Compare communication-information and multimedia technologies and their use in different smart environments.
To apply technologies of ambient intelligence in interaction with users.
To treat ergonomics in wider context.
To distinguish limitations of information delivery using different modalities.

<p>Modelirati interakcijo uporabnika s tehnologijo.</p> <p>Prilagoditi multimedejske vsebine za različne modalnosti.</p> <p>Koristiti različne pristope načrtovanja vmesnikov in interakcije.</p>	<p>Modelling user's interaction with the technology.</p> <p>Adapt multimedia content for different modalities.</p> <p>Utilize various approaches to interface and interaction design.</p>

5. Mandal, M., Multimedia Signals and Systems, Springer, 2012.

Cilji in kompetence:

Cilj predmeta Obdelava multimedijskih vsebin je študentu podati znanje za uporabo principov, postopkov in opreme za obdelavo in končno produkcijo multimedijskih vsebin.

Predmet vsebuje področja, ki obravnavajo sodobne postopke za obdelavo modeliranje in kodiranje signalov.

Študent spozna teoretične osnove delovanja postopkov za obdelavo signalov, kot tudi praktična orodja, ki te postopke uporabljajo. Študent je sposoben izbrati primeren postopek ter praktično uporabiti ustrezno orodje za napredno obdelavo in modeliranje signalov.

Študent spozna teoretično osnovo postopkov za precepčijsko zasnovano kompresijo multimedijskih signalov, ki je osnova standardov ter komercialnih rešitev za kodiranje zvoka, slike in videa.

Pridobljeno znanje je podlaga za učinkovito izbiro ustreznega standarda za kodiranje multimedijskih vsebin.

Študent obvlada procese digitalne distribucije vsebin s kodiranjem, enkapsulacijo podatkov, zaščito vsebin ter vrednotenjem kvalitete storitev.

Objectives and competences:

The objective of the course Multimedia content processing is to equip students with knowledge, required to use principles, procedures and software for multimedia signal processing and production. The course covers modern signal processing, modelling and encoding procedures and algorithms for multimedia content.

Students are taught theoretical background of methods for signal processing, as well as their implementation within available tools.

Students are capable of selection of the most convenient tool for specific problem, understanding the background and are capable to use the selected tool for efficient problem solution. Students are taught theoretical background of modern techniques for perceptual based compression of multimedia signals. Acquired knowledge is basis for efficient selection of appropriate standard for digital multimedia content encoding.

Students are skilled with usage of processes for digital distribution of content with encoding, encapsulation of data, content protection and evaluation of quality of services.

Predvideni študijski rezultati:

Po uspešno opravljenem modulu naj bi bili študenti zmožni:

- izbrati problemu ustrezne algoritme in postopke za analizo in rekonstrukcijo digitalnih multimedijskih signalov
- izbrati in uporabiti programska orodja in okolja za obdelavo multimedijskih signalov za različne ciljne platforme in za področja uporabe
- našteti in opisati vse pomembne modalnosti signalov v multimediji
- opisati fiziološke lastnosti zaznavanja zvoka, slike in videa iz vidika obsega podatkov, ki ga človek s svojimi čutili zmore zaznati
- opisati in uporabiti osnovne algoritme za izgubno zgoščevanje zvoka, slike in videa, in izbrati standarde za učinkovit kodni zapis multimedijskih signalov
- našteti, opisati in uporabiti sisteme za digitalno upravljanje z avtorskimi pravicami
- našteti in opisati in uporabiti postopke za vrednotenje kvalitete multimedejske storitve.

Intended learning outcomes:

After successful completion of the course, students should be able to:

- Choose for a problem appropriate algorithms and procedures for analysis and reconstruction of digital multimedia signals,
- select and use programing tools related to multimedia signal processing on a various platforms and problem-specific areas
- list and describe dominant signal modalities in multimedia services
- describe physiological perception of sound, images and video from standpoint of human communication channel capacity
- describe and use basic algorithms for lossy compression of sound, images and video, and select appropriate standard for effective coding of multimedia signals
- list, describe and use systems for digital rights management
- list, describe and use of methods for evaluation of multimedia service quality

Metode poučevanja in učenja:

Na predavanjih so študentom predstavljene teoretične osnove obravnavane snovi skupaj s prikazom rešitev enostavnih praktičnih problemov. Študentom je na voljo študijski material s podrobno vsebino.
Praktično delo poteka v okviru laboratorijskih vaj. Te so zasnovane v več delih, v katerih se študentje postopoma poglobljeno seznanjajo s praktičnimi problemi in orodji.

Learning and teaching methods:

The lectures provide a theoretical background on particular subjects together with presentation of simple practical examples. A complete study material is available to the students.
Practical work is being performed in the laboratory environment, and is accomplished in steps acquainting students with practical problems and tools.
Students are required to finish practical individual project. Project group consists of two or three

Študentje v okviru predmeta samostojno izdelajo projekt. Projektno skupino sestavlja dva ali trije študentje, ki opravijo naloge iz nabora predstavljenih nalog, kot npr.: izbira in uporaba postopka za vodno žigosanje ter analiza odpornosti tega na napade.

Ob koncu semestra študentje poročajo o končnih rezultatih s primerjavo izsledkov iz literature.

students who accomplish the task from list of available tasks such as: selection and usage of watermarking procedure and analysis of the watermark resilience to attacks.

At the end of semester, students report on their results together with comparison to the results from the literature.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik.	Regular enrolment.
----------------	--------------------

Vsebina:

1. Multimedijiški terminali: vrste terminalov v multimediji, osnovne strojne in programske značilnosti, zgradba multimedijiških terminalov.
2. Lastnosti multimedijiške terminalske opreme: funkcionalnost, zmogljivost, povezljivost, kompatibilnost, modularnost, standardi.
3. Zgradba terminalov, vhodno/izhodne enote: tehnologije prikazovalnikov, senzorji, tipkovnice, vmesniki, konvergenca terminalov, sistemska integracija.
4. Digitalni sistemi: osnovni principi delovanja digitalnih sistemov, CPE, pomnilnik, vhodno-izhodne enote.
5. Tehnološke zahteve različnih uporabniških vmesnikov: računska moč, ločljivost prikazovalnikov, energetska varčnost, skladnost s standardi. Načrtovanje strojne in programske opreme.
6. Načrtovanje aplikacij: ocena zahtevnosti algoritmov, optimizacija algoritmov za dano arhitekturo. Izbrani primeri multimedijiških terminalov v multimedijiških sistemih.
7. Življenski cikel razvoja multimedijiškega terminala: sistemski analiza in načrtovanje.
8. Tehnologije za napredno interakcijo: uporabniške zahteve, uporabniško usmerjeno načrtovanje, ergonomija.
9. Nosljivi in mobilni sistemi: karakteristike, avtonomija, povezljivost.
10. Pametni telefoni in tablični računalniki: profesionalna in domača okolja, učenje, zabava.

Content (Syllabus outline):

1. Multimedia terminals: overview of multimedia terminals, overview of hardware and software, architectures of multimedia terminals.
2. Attributes of multimedia terminal equipment: functionality, performance, connectivity, compatibility, modularity, relevant standards.
3. Architecture of terminals, input/output units: display technologies, sensors, keyboards, interfaces, convergence, system integration.
4. Digital systems: basic principles of digital systems, CPU, memory, input-output units.
5. User interfaces' technological requirements: computing power, display resolution, energy efficiency, standard compatibility. Designing hardware and software systems.
6. Application design: algorithm requirements, algorithm optimisation for target architecture.
7. Multimedia terminal life cycle: system analysis and design.
8. Technologies for advanced interaction: user requirements, user-centered design, ergonomics.
9. Wearable and mobile systems: characteristics, autonomy, connectivity.
10. Smart phone and tablet computer application domains: professional and home environments, learning, entertainment.

Temeljni literatura in viri / Readings:

1. Philip Kortum , HCI Beyond the GUI: Design for Haptic, Speech, Olfactory, and Other Nontraditional Interfaces, MK, 2009.
2. Achintya K. Bhowmik , Interactive Displays: Natural Human-Interface Technologies, Wiley, 2014.
3. Kim Goodwin and Alan Cooper, Designing for the Digital Age: How to Create Human-Centered Products and Services, Wiley, 2009.

Cilji in kompetence:

Razumevanje zgradbe in delovanja multimedijskih terminalov pri zajemu, obdelavi in prikazu multimedijskih signalov. Poznavanje omejitev in zmogljivosti terminalske opreme pri načrtovanju multimedijskih storitev.
Sooblikovanje načrtovanja uporabniške izkušnje in procesa načrtovanja aplikacij.
Načrtovanje multimedijske opreme za različne kontekste. Tehnološko poznavanje opreme za boljše načrtovanje storitev in aplikacij.

Objectives and competences:

Understanding architectures and functions of multimedia terminals for data acquisition, processing and visualization. Mastering limitations and performance of terminal equipment for designing multimedia services. Co-design user-experience process and application design process. Designing multimedia equipment for different contexts. Understanding technological background for better service and application design.

Predvideni študijski rezultati:

Po uspešno opravljenem modulu naj bi bili študenti zmožni:

Analizirati zgradbo in delovanje modernih terminalov v interakciji z uporabnikom.

Razviti vmesnike za interakcijo človek-računalnik pri razvoju multimedijskih storitev.

Pripraviti proces tehnološke podpore za izbran primer.

Analizirati obstoječe produkte in načrtovanje lastnih rešitev.

Uskladiti specifikacije z ustreznimi standardi.

Ovrednotiti ustreznost rešitev glede na podane specifikacije.

Intended learning outcomes:

After successful completion of the course, students should be able to:

Analysing architecture and functions of modern terminal equipment in interaction with users.

Designing interfaces for human-computer interaction for multimedia services.

Facilitate the process of technology support for selected case study.

Analysing of existing products and conceptualize alternative solutions.

Ensure specifications compatibility with relevant standards.

Evaluate solution in against to the specifications.

Metode poučevanja in učenja:**Learning and teaching methods:**

Na predavanjih so predstavljene teoretične osnove obravnavanih poglavij skupaj s prikazom rešitev enostavnih praktičnih primerov. Študentom je na voljo študijski material s podrobno vsebino. Praktično delo poteka v okviru laboratorijskih vaj. Študent na izbrano temo pripravi samostojni projekt, ki ga tudi predstavi.

The lectures provide a theoretical background on selected topics together with simple practical demonstrations. A complete study material is available online.

Practical work is being performed in the laboratory environment. Individual projects are based on selected topics and presented by students.

Opravljanje študijskih obveznosti je opredeljeno v Pravilniku o preverjanju in ocenjevanju znanja ter izpitnem redu FE.	As specified by internal acts of the University of Ljubljana and the Faculty of Electrotechnical engineering.
---	---

Vsebina:

Predavanja:

1. Načrtovanje uporabniške izkušnje in interaktivnosti (Ux).
2. Načrtovanje storitev (service design). Raziskovanje potreb (field research) in oblikovanje scenarijev.
3. Uporabniško usmerjeno načrtovanje (UCD).
4. Uporabnost (usability).
5. Lastnosti človeške percepce in načrtovanje dostopnosti storitev (accessibility).
6. Specifika uporabniških skupin, modeliranje uporabnikov in oblikovanje person.
7. Modalnosti interakcije.
8. Osnove vizualnega dizajna.
9. Omejitve terminalne opreme v smislu načrtovanja Ux in interakcij.
10. Načrtovanje uporabniških vmesnikov in hitro prototipiranje (wireframing).
11. Metodologije evaluacije in testiranje uporabniških vmesnikov, interakcij in prototipov. Metametodologije.
12. Prinzipi kognitivnega toka (cognitive flow) in igrifikacije (gamification). Socialne interakcije.
13. Formati za predstavitev uporabniških vmesnikov in orodja za snovanje, prototipiranje in evaluacijo.
14. Primeri dobre prakse in aplikacija v industriji. Standardizacija.

Vaje:

1. Utrjevanje pri predavanjih obravnavane snovi s praktičnim delom
2. Zasnova uporabniškega vmesnika na izbranem primeru
3. Postopki evalvacije uporabniških vmesnikov

Content (Syllabus outline):

Lectures:

1. User experience and interaction design
2. Service design. Requirements field research and use case scenarios.
3. User centred design
4. Usability.
5. Specifics of human perception and accessibility design.
6. User groups specifics, user modelling and personas design
7. Interaction modalities
8. Basics of visual design
9. Properties and limitations of terminals in terms of Ux interaction.
10. Design of user interfaces and rapid prototyping (wireframing).
11. Evaluation and testing methodologies for user interfaces, interactions and prototypes. Metamethodologies.
12. Cognitive flow and gameification principles. Social interactions.
13. User interface presentational formats and design, prototyping and evaluation tools.
14. Best practise examples and applications in industry. Standardisation.

Practical work:

1. Reviewing of knowledge from lectures with examples.
2. Design of a user interface and interactions for a selected example.
3. User evaluation of a selected user interface.

Temeljna literatura in viri / Readings:

1. Krug, S. »Don't Make Me Think: A Common Sense Approach to Web Usability, 3rd Edition«, New riders, 2014, ISBN-13: 978-0321965516,

Cilji in kompetence:

Cilj predmeta je podati vpogled v področje uporabniške izkušnje in s tem povezanega načrtovanja uporabniških vmesnikov. Predmet obravnava koncepte in značilnosti interakcije med človekom in napravo ter postopke v procesu snovanja uporabniških vmesnikov. Skozi poznavanje orodij in evaluacijske postopke predmet podaja znanja za izvedbo uporabniških vmesnikov na različnih napravah.

Objectives and competences:

The goal of the subject is to give common view into the field of user experience and related user interface design. The course deals with the concepts and specifics of human - device interaction and the procedures of user interface design process. Through gained knowledge of tools and evaluation procedures the course gives knowledge for the design of user interfaces on different devices.

Predvideni študijski rezultati:

Po uspešno opravljenem predmetu naj bi bili študenti zmožni:

- Opisati in povezovati terminologijo s področja in principov UX, UCD, uporabnosti in dostopnosti;
- Predstaviti dobre prakse iz industrije
- Modelirati lastnosti uporabniških skupin, raziskati uporabniške potrebe in izdelati scenarije;
- Izvesti postopke zasnove, prototipiranja in evaluacije;
- Koristiti orodja za snavanje in prototipiranje uporabniških vmesnikov;
- Učinkovito evalvirati uporabniške vmesnike z različnimi metodologijami

Intended learning outcomes:

After successful completion of the course students should be able to:

- Describe and link the terminology in the field of UX, UCD, usability and accessibility;
- Present good industry practices
- Model characteristics of user groups, explore user needs and create scenarios;
- Conduct design, prototyping and evaluation procedures;
- Use tools for designing and prototyping of user interfaces;

<ul style="list-style-type: none"> - Se sprotno prilagajati UCD ciklu v postopku načrtovanja uporabniških vmesnikov; - Poiskati in koristiti industrijske standarde 	<ul style="list-style-type: none"> - Effectively evaluate user interfaces with different methodologies - Adjust the UCD cycle in the user interface design process; - Find and use industry standards
---	--

Metode poučevanja in učenja:

Predavanja, vaje s predstavitevami rezultatov. Poseben poudarek je na sprotnem študiju in na samostojnem delu pri vajah.

Learning and teaching methods:

Lectures, practical work with presentations of results. Special emphasis on continuous and prompt study, and independent practical work.

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Temeljni literatura in viri / Readings:

1. Sodnik J, Tomažič S: Spatial auditory human-computer interfaces, SpringerBriefs in Computer Science, september 2015.
2. Begault R. Durand: 3D Sound for Virtual Reality and Multimedia, Academic Press, Inc. UK, 1994.
3. Rumsey F: Spatial Audio (Music Technology), Elsevier, 2005.

Cilji in kompetence:

Širši vpogled v področje 3D zvoka in njegove uporabe v sodobnih multimedijskih storitvah in napravah. Študentje naj spoznajo osnovne fizikalne značilnosti zvočnega valovanja v različnih medijih in prostorih ter sposobnosti dojemanja in lokalizacije zvoka pri ljudeh. Osvojijo tudi znanja s področja zajema in implementacije 3D zvoka ter njegove uporabe v interakciji med uporabnikom in sodobnimi multimedijskimi napravami.

Objectives and competences:

Broader insight into 3D sound and its use in modern multimedia services and devices. Students should understand the basic physical characteristics of sound waves in different media and spaces, and the ability of perception and sound localization in humans. They also acquire the knowledge on recording and implementation techniques of 3D sound and its use in the interaction between a user and modern multimedia devices.

Predvideni študijski rezultati:

Po uspešno opravljenem modulu naj bi bili študenti zmožni:

- opisati osnovne lastnosti in zakonitosti zvočnega valovanja v prostoru,
- razložiti mehanizme lokalizacije prostorskega zvoka pri človeku,
- razložiti tehnike snemanja 3D zvoka,
- razložiti tehnike obdelave 3D zvoka,
- razložiti tehnike generacije 3D zvoka s pomočjo digitalnega signalnega procesiranja,
- razložiti tehnike predvajanja 3D zvoka s pomočjo različnih konfiguracij zvočnikov,
- opisati kategorije in specifice različnih zvočnih uporabniških vmesnikov, ki temeljijo na uporabi 3D zvoka

Intended learning outcomes:

After successful completion of the course, students should be able to:

- describe basic properties and principles of acoustic wave in a space,
- explain mechanisms for human sound localization,
- explain techniques for 3D sound recording,
- explain techniques for 3D sound processing,
- explain techniques for generation of 3D sound through digital signal processing,
- explain techniques for replaying 3D sound through different configurations of loud speakers
- describe different categories and specifics of auditory user interfaces based on 3D sound

Metode poučevanja in učenja:

Learning and teaching methods:

Predavanja, na katerih se študent seznan s teoretičnimi osnovami, in laboratorijske vaje, kjer nekaj problemov spozna tudi praktično in jih skuša v duhu timskega dela reševati.	Lectures in which the student is acquainted with the theoretical basics and lab work where the student meets the practical problems and solves them in the team.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: _____

Prerequisites: _____

Vpis v letnik študija

Enrolment in the year of the course

Vsebina:

- Osnove vgrajenih sistemov in sistemov v realnem času.
- Pregled področja sodobnih vgrajenih sistemov z multimedijsko funkcionalnostjo.
- Strojna oprema, operacijski sistemi, programski jeziki ter orodja za vgrajene multimedijске sisteme.
- Razvoj lastnega sistema na enem od komercialno dostopnih učnih razvojnih sistemov (Arduino, Raspberry Pi,...)

Content (Syllabus outline):

- Basics of embedded systems and real-time systems
- State-of-the-art embedded systems with multimedia functionalities.
- Hardware, operating systems, programming languages, and tools for embedded multimedia systems.
- Development of a customized embedded system using a commercialy available training development system (Arduino, Raspberry Pi,...)

Temeljni literatura in viri / Readings:

1. Edward Ashford Lee, Sanjit Arunkumar Seshia, Introduction to Embedded Systems: A Cyber-Physical Systems Approach, MIT Press, 2017
2. Elecia White, Making Embedded Systems: Design Patterns for Great Software, O'Reilly, 2012

4. Tay Vaughan, Multimedia: Making It Work, Ninth Edition 9th Edition, McGraw-Hill, 2014
5. Mark Lutz, Learning Python, 5th Edition, O'Reilly, 2017

Cilji in kompetence:

Spoznavanje osnovnih pojmov s področja vgrajenih sistemov na področju multimedije, njihove zgradbe, delovanja, snovanja in izdelave.

Poudarek praktičnega dela predmeta je razvoj sistemov s programskim jezikom Python.

Objectives and competences:

Knowledge of fundamentals of embedded systems in multimedia, their structure, operation, design and implementation.

A hands-on focus of the subject is a system development using Python programming language.

Predvideni študijski rezultati:

Po uspešno opravljenem modulu naj bi bili študenti zmožni:

- prepozнатi različne komponente tipičnega vgrajenega sistema
- pojasniti prednosti in pasti, ki jih prinaša uporaba programskih knižnjic
- pojasniti izvive, ki jih prinaša implementacija vgrajenega sistema kot multimedejskega sistema
- izluščiti poglavite komponente sistema v realnem času
- razviti preprost sistem na podlagi seznama naročnikovih zahtev ter ga implementirati v konkretnem računalniškem jeziku
- ovrednotiti algoritmsko učinkovitost podanega algoritma
- presoditi, kako učinkovita je konkretna rešitev z vidika porabe sredstev, pravilnosti, in zanesljivosti delovanja, prijaznosti do uporabnika, ter možnosti vzdrževanja in nadgradnje

Intended learning outcomes:

After a successful completion of the course, students should be able to:

- identify various components of a typical embedded system
- explain the advantages and drawbacks of using software libraries
- explain the challenges brought about by implementing an embedded system as a multimedia system
- extract the main components of a real-time system
- develop a simple system based on a list of customer requirements and implement it using a specific programming language
- evaluate algorithmic efficiency of a given algorithm
- evaluate the efficiency of a specific solution in terms of the usage of resources, correctness and reliability, user-friendliness, and maintainability

Metode poučevanja in učenja:

Predavanja, praktični prikazi, laboratorijske vaje, individualno delo z zahtevnejšimi študenti, uporaba spletnih tehnologij, domače naloge

Learning and teaching methods:

Lectures, practical demonstrations, laboratory work, individual work with advanced students, web technologies, homeworks

Vsebina:

Vsebina predavanj:

Predmet bo pokrival naslednje vsebine:

- Poizvedovanje in iskanje po spletu
 - Osnovni koncepti poizvedovanja
 - Modeli poizvedovanja
 - Odziv ustreznosti
 - Mere za ocenjevanje točnosti poizvedb
 - Predobdelava besedil in spletnih strani
 - Inverzni index in njegova kompresija
 - Latentno semantično indeksiranje

Content (Syllabus outline):

Content of the course:

This course will cover the following topics:

- Information Retrieval and Web Search
 - Basic Concepts of Information Retrieval
 - Information Retrieval Models
 - Relevance Feedback
 - Evaluation Measures
 - Text and Web Page Pre-Processing
 - Inverted Index and Its Compression
 - Latent Semantic Indexing

<ul style="list-style-type: none"> ▪ Iskanje po spletu ▪ Meta iskanje po sletu: kombiniranje različnih načinov rangiranja • Spletno pregledovanje in indeksiranje <ul style="list-style-type: none"> ▪ Osnovni algoritem spletnega pajka ▪ Univerzalni spletni pajek ▪ Fokusirani spletni pajki ▪ Domenski spletni pajki • Ekstrakcija strukturiranih podatkov <ul style="list-style-type: none"> ▪ Indukcija ovojnice ▪ Generiranje ovojnlice na osnovi primera ▪ Samodejna izdelava ovojnice ▪ Ujemanje glede na obliko besede ali drevesne strukture ▪ Večkratna poravnava ▪ Gradnja DOM dreves ▪ Ekstrakcija glede na stran s seznamom ali več strani • Integracija podatkov <ul style="list-style-type: none"> ▪ Ujemanje glede na podatkovno shemo ▪ Ujemanje glede na domeno in primere ▪ Združevanje podobnosti ▪ Ujemanje 1:m ▪ Integracija iskalnikov po spletnih straneh ▪ Izgradnja globalnega iskalnika po spletnih straneh • Rudarjenje mnenja in analiza sentimenta <ul style="list-style-type: none"> ▪ Klasifikacija dokumentov po sentimentu ▪ Ugotavljanje subjektivnosti v stavkih in klasifikacija sentimenta ▪ Slovarji besed in fraz, nosilcev mnenja ▪ Aspektno orientirano rudarjenje mnenja ▪ Iskanje in extrakcija mnenja 	<ul style="list-style-type: none"> ▪ Web Search ▪ Meta-Search: Combining Multiple Rankings • Web Crawling <ul style="list-style-type: none"> ▪ A Basic Crawler Algorithm ▪ Implementation Issues ▪ Universal Crawlers ▪ Focused Crawlers ▪ Topical Crawlers • Structured Data Extraction <ul style="list-style-type: none"> ▪ Wrapper Induction ▪ Instance-Based Wrapper Learning ▪ Automatic Wrapper Generation ▪ String Matching and Tree Matching ▪ Multiple Alignment ▪ Building DOM Trees ▪ Extraction Based on a Single List Page or Multiple Pages • Information Integration <ul style="list-style-type: none"> ▪ Schema-Level Matching ▪ Domain and Instance-Level Matching ▪ Combining Similarities ▪ 1:m Match ▪ Integration of Web Query Interfaces ▪ Constructing a Unified Global Query Interface • Opinion Mining and Sentiment Analysis <ul style="list-style-type: none"> ▪ Document Sentiment Classification ▪ Sentence Subjectivity and Sentiment Classification ▪ Opinion Lexicon Expansion ▪ Aspect-Based Opinion Mining ▪ Opinion Search and Retrieval

Temeljni literatura in viri / Readings:

1. Bing Liu, Web Data Mining: Exploring Hyperlinks, Contents, and Usage Data (Data-Centric Systems and Applications, Springer, August 2013
2. Ricardo Baeza-Yates , Berthier Ribeiro-Neto: Modern Information Retrieval: The Concepts and Technology behind Search, 2nd Edition, ACM Press Books, 2010

Cilji in kompetence:

Cilj predmeta je študente naučiti, kako sprogramirati iskanje po spletu (po indeksiranem in neindeksiranem delu spleta) ter kako razviti programe za ekstrakcijo strukturiranih podatkov s statičnih in dinamičnih spletnih strani. Študentje bodo spoznali osnovne koncepte spletnega iskanja in ekstrakcije podatkov s spleta ter se naučili potrebnih tehnik, ki so za to potrebne. Po uspešno opravljene predmetu bodo sposobni samostojnega razvoja aplikacij, ki avtomatizirajo spletno iskanje in ekstrahirajo podatke s spletnih strani, vključno z ekstrakcijo podatkov iz on-line socialnih medijev.

Objectives and competences:

The main objective of this course is to teach students about how to develop programs for web search (including surface web and deep web search) and for extraction of structural data from both, static and dynamic web pages. Beside basic concepts of the web search and retrieval, students will learn about relevant techniques and approaches. After the course, if successful, students will be able to develop programs for automatic web search and structured data extraction from web pages (including search and extraction from on-line social media).

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje osnovnih tehnik podatkovnega rudarjenja in analize podatkov, poznavanje programskih jezikov java, python, poznavanje HTML, XHTML, XML ter strukture spletnih strani.

Uporaba: Uporaba pri razvoju aplikacij, ki uporabljajo splet kot pomemben vir podatkov.

Refleksija: Zmožnost razvoja sodobnih aplikacij in izkoriščanje spletja kot neomejene podatkovne zbirke.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnosti uporabe domače in tujе literature in drugih virov, uporaba programskih jezikov, algoritmično razmišljanje.

Intended learning outcomes:

Knowledge and understanding: Knowledge and understanding of basic principles of data mining and analysis, knowledge of program languages java, python, knowledge of HTML; XHTML, XML and basic structure of web pages.

Application: development of web-insensitive applications.

Reflection: Capability for developing innovative applications taking advantage of web as unlimited data source.

Transferable skills: Application of domestic and foreign literature, application of program languages, algorithmic thinking, etc.

Metode poučevanja in učenja:

Predavanja, računske vaje z ustnimi nastopi, projektni način dela pri domačih nalogah in seminarjih.

Learning and teaching methods:

Lectures, seminars, homeworks, oral presentations, project work.

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):	50%	Type (examination, oral, coursework, project):
Sprotno preverjanje (domače naloge, kolokviji in projektno delo)		Continuing (homework, midterm exams, project work)
Končno preverjanje (pisni in ustni izpit)	50%	Final (written and oral exam)
Ocene: 6-10 pozitivno, 5 negativno (v skladu s Statutom UL).		Grading: 6-10 pass, 5 fail (according to the rules of University of Ljubljana).

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

--	--

Vsebina:

Predmet poučuje koncept in uporabo paradigmе funkcijskega programiranja, skozi katero se dotika teorije programskega jezikov in poglobljenega razumevanja njihovih lastnosti. Poglavlja pri predmetu vsebujejo:

1. Uvod v funkcionalno programiranje.
2. Pojem okolja, leksikalnega in semantičnega dosega.
3. Osnove funkcijskega jezika Standard ML (sintaksa, semantika, enostavni in sestavljeni

Content (Syllabus outline):

The course teaches the concept and use of a functional programming paradigm and connects it to the programming language theory through a deeper understanding of programming language concepts. The content contains:

1. Introduction to functional programming.
2. Concepts of: environment, lexical and semantic scope.

<p>podatkovni tipi, opcije, lastni tipi) in osvajanje naslednjih pojmov:</p> <ul style="list-style-type: none"> • ujemanje vzorcev, • funkcije višjega reda, currying, • delo z moduli. <p>4. Osnove funkcionskega jezika Racket in osvajanje naslednjih pojmov:</p> <ul style="list-style-type: none"> • takojšnja in lena evalvacija, • tokovi, • zakasnitev in sprožitev, • gradnja podatkovnih tipov, • funkcije z dinamičnim številom argumentov, • izdelava interpretéra. <p>5. Primerjava funkcionskega in objektno usmerjenega programiranja.</p> <p>6. Vrste tipiziranj (statično/dinamično, močno/šibko, implicitno/eksplicitno) in trdnost/pолност sistema tipov.</p>	<p>3. Basics of Standard ML (syntax, semantics, basic and complex data types, options, custom types) and concepts:</p> <ul style="list-style-type: none"> • pattern matching, • higher order functions, currying, • working with modules. <p>4. Basics of Racket programming language and concepts:</p> <ul style="list-style-type: none"> • eager and lazy evaluation, • streams, • delay and force, • building custom datatypes, • functions with variable number of arguments, • making an interpreter. <p>5. Comparison of functional and object-oriented programming.</p> <p>6. Different types of typing (static/dynamic, weak/strong, implicit/explicit) and soundness/completeness of a type system.</p>
---	---

Temeljni literatura in viri / Readings:

1. R. Pucella: Notes on Programming SML/NJ, Cornell, 2001
2. Matthew Flatt, Robert Bruce Findler et al.: The Racket Guide, 2015.
3. Ravi Sethi: Programming Languages: concepts & constructs. Addison-Wesley, 1996.
4. A. Tucker, R. Noonan: Programming Languages: Principles and Paradigms. McGraw-Hill, 2007.

Cilji in kompetence:

Študenti, ki so dokončali prvostopenjski študij RI, so opravili predmete s področja osnov programiranja in pretežno spoznali objektno-usmerjeno paradigma programiranja. Cilj tega predmeta predstaviti drugačne tehnike programiranja s poudarkom na funkcionskem programiranju. Predmet bo študentom omogočil razvoj večin kritičnega, analitičnega in sintetičnega mišljenja pri uporabi in razumevanju delovanja

Objectives and competences:

Students who finished the undergraduate study of computer science already completed courses on basics of programming and mostly used the object-oriented programming paradigm. The objective of this course is to present alternative programming techniques with the emphasis on functional programming. The course will help develop students' skills in critical, analytical and synthetic thinking for use and understanding of

programskih jezikov kot temeljnih orodij vsakega programerja.

programming languages as basic tools of each programmer.

Predvideni študijski rezultati:

Znanje in razumevanje: Študent bo poznal in zнал uporabljati različne pristope k programiranju v odvisnosti od konkretnih kontekstov.

Uporaba: predmet bo študentom predstavljal osnove različnih področij programiranja, ki so aktualne za potrebe računalniške industrije. Predmet bo od študenta poleg prilaganja različnim paradigmam zahteval tudi hitro učenje različnih jezikov in ga s tem pripravljal na delo v sodobni računalniški industriji.

Refleksija: Poleg konkretnih znanj bodo študenti dobili tudi teoretičen pregled nad različnimi področji programiranja, kar jim bo omogočilo tudi boljše prilaganje potrebam industrije v prihodnosti.

Prenosljive spremnosti - niso vezane le na en

predmet: Znanje programiranja je potrebno za večino drugih predmetov študija.

Intended learning outcomes:

Knowledge and understanding: The student will understand and be able to apply different approaches to programming suitable to various contexts.

Application: The course will present various areas of programming relevant to the current trends. The subject will, on purpose, require quick adaptations to various paradigms and languages, which will prepare the students for successful work in modern computer industry.

Reflection: Besides the practical knowledge, the students will gain a theoretical insight into various forms of programming, which will enable them for faster adaptations to new techniques that will appear in the future.

Transferable skills: Programming is the basic skill and an implicitly required prerequisite for most other courses.

Metode poučevanja in učenja:

Predavanja, domače naloge in seminarske naloge. Poseben poudarek je na individualnem delu študentov.

Learning and teaching methods:

Lectures, homeworks and seminar works with special emphasis on individual work.

Delež (v %) /

Prerequisites:

--	--

Vsebina:

Content (Syllabus outline):

Predavanja:	Lectures:
<p>1. Sposobnosti človeka (spomin in učenje, zaznavanje, poznavanje).</p> <p>4. Vrste komunikacije človek računalnik (KČR) (vhodni modeli, izhodni modeli).</p> <p>5. Pravila načrtovanja za KČR (principi, navodila).</p> <p>6. Vzorec model-pogled-nadzornik.</p> <p>7. Glasovni vmesniki.</p> <p>8. Komunikacija možgani računalnik in elektroencefalogram.</p> <p>9. Načrtovanje neinvazivnega vmesnika možgani računalnik (VMR).</p> <p>10. Mednarodna referenčna podatkovna baza za načrtovanje VMR (EEGMMI DS - EEG Motor Movement/Imagery DataSet).</p> <p>11. Izločanje časovno prostorskih značilk.</p> <p>12. Spektralna analiza (časovno frekvenčne predstavitev, parametrično modeliranje).</p> <p>13. Klasifikacija časovno prostorskih značilk.</p> <p>14. VMR s strojnim učenjem.</p> <p>15. VMR aplikacije (pomikanje kurzorja, črkovanje, komunikacija za hendikepirane).</p>	<p>15. Human capabilities (memory and learning, perception, cognition).</p> <p>16. Human-Computer Interaction (HCI) types (input models, output models).</p> <p>17. Design rules for HCI (principles, guidelines).</p> <p>18. Model-view-controller pattern.</p> <p>19. Voice interfaces.</p> <p>20. Brain-computer interaction and electroencephalogram.</p> <p>21. Design of non-invasive Brain-Computer Interface (BCI).</p> <p>22. International reference database to design BCI (EEGMMI DS - EEG Motor Movement/Imagery DataSet).</p> <p>23. Extraction of spatio-temporal features.</p> <p>24. Spectral analysis (time-frequency representations, parametric modeling).</p> <p>25. Classification of spatio-temporal features.</p> <p>26. BCI with machine learning.</p> <p>27. BCI applications (cursor moving, spelling, communication for the disabled).</p>
Vaje:	Practical work:
<p>1. Utrjevanje pri predavanjih obravnavane snovi s primeri.</p>	<p>1. Strenghtening of topics from lectures with examples.</p>

2. Predstavitev tipičnih aspektov načrtovanja aplikacij KČR.

Domače naloge:

Študentje izdelajo tri projekte oziroma aplikacije in vsakega od njih zagovarjajo učitelju. Te projekte lahko študentje opravljamjo tudi pri vajah ob pomoči učitelja.

2. Representing typical aspects of design of HCI applications.

Homeworks:

Students derive three projects or applications and each of them has to be defened to teacher. These projects can be derived at laboratory work under teacher supervision.

Temeljna literatura in viri / Readings:

7. Sanei, Chambers: *EEG Signal Processing*, 2007, Wiley.
8. Stone, Jarett, Woodroffe, Minocha: *User Interface Design and Evaluation* 2005, Morgan Kaufmann.
9. Selected articles from journals (Schalk, McFarland, Hinterberger, Birbaumer, Wolpaw: *BCI2000: A General-Purpose Brain-Computer Interface (BCI) System*, IEEE TBME, Vol. 51, No. 6, pp. 1034-1043, June 2004.; Wolpaw, McFarland: *Control of a two-dimensional movement signal by a noninvasive brain-computer interface in humans*, PNAS, Vol. 101, No 51, pp. 17849-17854, Dec. 2004.)

Cilji in kompetence:

Cilj predmeta je podati splošni vpogled v področje interakcije med človekom in računalnikom.
Študentje naj razumejo širok razpon konceptov pri komunikaciji med človekom in računalnikom ter naj so sposobni uporabiti principe, navodila in tehnike načrtovanja za: načrtovanje interaktivnih aplikacij in uporabniških vmesnikov, s posebnim poudarkom na komunikaciji možgani računalnik, za njihovo analizo in evaluacijo.

Objectives and competences:

The goal of the subject is to give common view into the field of interaction between human and computer. Students should understand wide range of concepts in communication between human and computer, and should be able to use principles, guidelines and designing techniques to design interactive applications and user interfaces, with special emphasis on brain computer interaction, and to analyse and evaluate them.

Predvideni študijski rezultati:

Znanje in razumevanje:

Poznavanje osnovnih konceptov komunikacije človek računalnik; poznavanje konceptov interakcije; poznavanje principov, navodil in

Intended learning outcomes:

Knowledge and understanding:

Knowing basic concepts of human-computer interaction; knowing concepts of interactions; knowing principles, guidelines and procedures of

postopkov načrtovanja interaktivnih aplikacij ter vmesnikov; poznavanje postopkov njihovega vrednotenja.

Uporaba:

Uporaba znanj področja komunikacije med človekom in računalnikom pri načrtovanju in vrednotenju interaktivnih aplikacij.

Refleksija:

Pridobitev lastnih izkušenj o dobrih in slabih vmesnikih z ozirom na splošno sprejeta navodila in standarde tega področja. Pridobitev kritičnega odnosa do načrtovanja vmesnikov in interakcije. Znanje o dobro in slabo načrtanih uporabniških vmesnikih, skupaj z znanjem principov interakcije in navodil omogoča jasno razumevanje o tem kaj je narobe z vmesnikom, kako je interakcija lahko izboljšana in kako razviti boljši vmesnik.

Prenosljive spremnosti - niso vezane le na en predmet:

Znanja tega predmeta se ne omejujejo le na načrtovanje interaktivnih aplikacij in vmesnikov pač pa vključujejo tudi študije ljudi in računalniških tehnologij ter kako eni in drugi vplivajo drug na drugega. Področje komunikacije med človekom in računalnikom je večdisciplinarno področje, ki povezuje tudi nekatere elemente analize sistemov, razvoja programske opreme, računalniške grafike, digitalnega procesiranja signalov, umetne inteligence, kognitivnih znanosti, psihologije, sociologije in ergonomije.

designing interactive applications and interfaces; knowing procedures to evaluate them.

Application:

Use of knowledge of the field of human-computer interaction at designing and evaluating of interactive applications.

Reflection:

Acquiring skills about good and bad user interfaces with regard to commonly accepted guidelines and standards of the field. Adopting critical attitude in designing interfaces and interaction. Knowledge about goodly and badly designed user interfaces, together with knowledge about principles of interactions and guidelines clearly allow understanding about what is wrong with the interface, how the interaction can be improved and how to design better interface.

Transferable skills – not connected to one subject only:

Knowledge of this subject is not connected to interactive application and interface design only but also includes studies of human and computer technologies, and how they interfere with each other. The field of human-computer interaction is multidisciplinary field which also connects certain elements of system analysis, development of software, computer graphics, digital signal processing, artificial intelligence, cognitive sciences, psychology, sociology, and ergonomics.

Metode poučevanja in učenja:

Learning and teaching methods:

Predavanja, vaje z ustnimi zagovori, domače naloge. Poseben poudarek je na sprotnem študiju in na samostojnem delu pri vajah in domačih nalogah.	Lectures, practical work with oral defences, homeworks. Special emphasis on continuous and prompt study, and independent practical work and homeworks.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

--	--

Vsebina:

Razvoj aplikacij, ki se izvajajo na strežnikih
Definicija računalništva v oblaku: kaj je računalništvo v oblaku, namen, vloga in pomen, cilji
Izzivi: upravljanje infrastrukture, arhitektura aplikacij za oblak, shranjevanje podatkov, varnost, ostali vidiki
Lastnosti: samo oskrba na zahtevo, elastičnost in skalabilnost, dostop v obliki storitev, nadzor storitev, souporaba virov (pooling), itd.
Storitveni modeli: IaaS (Infrastruktura kot storitev), PaaS (Platforma kot storitev), SaaS (Aplikacije kot storitve), XaaS
Podrobni pregled IaaS (Infrastruktura kot storitev)

- Pregled konceptov, arhitekturni vidik

Content (Syllabus outline):

Developing applications for the server-side
Definition of cloud computing: what is cloud computing, purpose, role and importance, objectives
Challenges: Infrastructure Management, Application Architecture for cloud, data storage, security, other aspects
Features: on demand self-provisioning, elasticity and scalability, access in the form of services, monitoring, sharing of resources (pooling), etc..
Service models: IaaS (Infrastructure-as-a-Service), PaaS (Platform-as-a-Service), SaaS (Software-as-a-Service), XaaS
Detailed overview of IaaS:

- Overview of concepts, architectural perspective
- Private cloud, public cloud, hybrid cloud, virtual cloud

<ul style="list-style-type: none"> • Privatni oblak, javni oblak, hibridni oblak, virtualni oblak • Spoznavanje in primerjava najpomembnejših IaaS tehnologij <p>Podrobni pregled PaaS (Platforma kot storitev)</p> <ul style="list-style-type: none"> • Pregled konceptov, arhitekturni vidik • Spremembe v razvojnih modelih: Trajno stanje: distribuirani datotečni sistemi, nestrukturirirane shrambe, NoSQL baze, SQL baze v oblaku; Poslovna logika: spletne storitve, REST storitve, ostale tehnologije; Izvajalno okolje • Spoznavanje in primerjava najpomembnejših PaaS tehnologij: Java EE, Azure, Google App Engine, itd. <p>Podrobni pregled SaaS (Aplikacije kot storitve)</p> <ul style="list-style-type: none"> • Pregled konceptov, arhitekturni vidik • Model dostopa, koncept razvoja • Poslovni model, storitve v oblaku (lokacijske, dostava podatkov, bogatenje podatkov, integracijske storitve, poslovna inteligenco, itd.) <p>Namestitveni modeli</p> <ul style="list-style-type: none"> • Zasebni, javni, hibridni, skupni oblak • Na lokaciji, pri ponudniku, hibridni model, pregled ponudnikov <p>Migracija v oblak</p> <p>Nadzor, upravljanje, SLA in QoS</p> <p>Praktični del:</p> <ul style="list-style-type: none"> • Vzpostavitev lastnega računalniškega oblaka • Razvoj aplikacij za oblak <ul style="list-style-type: none"> ◦ Tehnološki vidiki ◦ Vsebinsko-poslovni vidiki • Razvoj inovativnih aplikacij, ki delujejo v oblaku • Konfiguriranje hibridnega računalniškega oblaka • Spoznavanje najpomembnejših javnih oblakov: Amazon, Google App Engine, Azure, OpenStack, itd. • Študija prenosljivost oblačnih rešitev med ponudniki • Razvoj specifičnih razširitev za oblak 	<ul style="list-style-type: none"> • Getting to know and compare the most important IaaS technologies <p>Detailed overview of PaaS:</p> <ul style="list-style-type: none"> • Overview of concepts, architectural perspective • Changes in development models: data persistence: distributed file systems, unstructured storage, NoSQL database, SQL database in the cloud; Business tier: Web services, REST services, other technology runtime environment • Understanding and comparison of major PaaS technologies: Java EE, Azure, Google App Engine, etc. <p>Detailed overview of SaaS:</p> <ul style="list-style-type: none"> • Overview of concepts, architectural perspective • Access Models, Development Concepts • Business models, Cloud Services (location, data delivery, data enrichment, integration services, business intelligence, etc.). <p>Deployment models</p> <ul style="list-style-type: none"> • Private, public, hybrid, shared cloud • On premises, remote, hybrid model, overview of providers <p>Migration to the cloud</p> <p>Control, management, SLA and QoS</p> <p>Practical part:</p> <ul style="list-style-type: none"> • Deploying, setting up and configuring your own Cloud • Developing applications for the cloud <ul style="list-style-type: none"> ◦ Technological aspects ◦ Content and business aspects • Development of innovative applications that run in the cloud • Configuring a hybrid cloud • Getting to know the most important public clouds: Amazon, Google App Engine, Azure, OpenStack, etc. • Portability study between cloud solution providers • Development of cloud-specific extensions

Temeljni literatura in viri / Readings:

3. Barrie Sosinsky, Cloud Computing Bible, Wiley; 2011.
4. George Reese, Cloud Application Architectures: Building Applications and Infrastructure in the Cloud, O'Reilly Media; 2009.
5. David S. Linthicum, Cloud Computing and SOA Convergence in Your Enterprise, Addison-Wesley Professional, 2009.
6. John Rhoton, Risto Haukioja, Cloud Computing Architected: Solution Design Handbook, Recursive Press, 2011.
7. Matjaz B. Juric et al., Do more with SOA Integration, Packt Publishing, 2011.

Cilji in kompetence:

Cilj predmeta je osvojiti poglobljene znanje in poznavanje področja računalništva v oblaku in vseh nivojev storitvene usmerjenosti (XaaS), osvojiti znanje s področja infrastrukture, platforme in aplikacij v obliki storitev, spoznati načrtovalske vzorce, arhitekturne modele in dobre prakse ter razumeti pomen inovativnih aplikacij v oblaku.

Kompetence:

Študentje bodo sposobni vzpostaviti infrastrukturo za delovanje privatnih, hibridnih in zasebnih oblakov, načrtovati in implementirati arhitekturo platforme PaaS, načrtovati in implementirati aplikacije, ki se izvajajo na PaaS, razumeti specifice oblačnih arhitektur in infrastruktur. Uspodbjeni bodo za razvoj SaaS aplikacij na najpomembnejših PaaS/IaaS. Razumeli bodo pomen inovacij v oblaku.

Objectives and competences:

The course objective is to provide an in-depth knowledge and understanding of the scope of cloud computing and all levels of service orientation (XaaS), provide knowledge of infrastructure, platforms, and applications in the form of services, get familiar with design patterns, architectural models and best practices and understand the importance of innovative applications in the cloud.

Competences:

Students will be able to deploy the infrastructure for the operation of private, hybrid and private clouds, to design and implement PaaS platform architecture, design and implement applications that are implemented on PaaS, understand the specifics of cloud architectures and infrastructures. Students will be trained to develop SaaS applications on most important PaaS / IaaS platforms and understand the importance of innovation in the cloud.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje in razumevanje infrastruktur in arhitektur računalniških oblakov, sposobnost razvoja aplikacij za oblak, sposobnost vzpostavite privatnih in hibridnih oblakov ter uporabo javnih oblakov, razvoj inovativnih SaaS aplikacij.

Uporaba: Uporaba v sklopu razvoja aplikacij in informacijskih sistemov.

Intended learning outcomes:

Knowledge and understanding: Knowledge and understanding of cloud computing infrastructures and architectures, the ability to develop applications for the cloud, the ability to establish private and hybrid clouds and to use the public clouds, and to develop innovative SaaS applications.

Application: Application in the context of application development and information systems.

Refleksija: Zmožnost razvoja inovativnih aplikacij in zmožnost nadgradnje in razširitev obstoječih oblaken infrastruktur in platform.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnosti uporabe javnih oblakov, domače in tuje literature in drugih virov, uporaba IKT, uporaba sistematičnih pristopov, analiza potreb, identifikacija in reševanje problemov, skupinsko delo.

Reflection: Ability to develop innovative applications and the ability to upgrade and extend existing cloud infrastructures and platforms.

Transferable skills: Skills of public clouds usage, both domestic and foreign literature and other sources, usage of ICT, usage of systematic approaches, requirements analysis, identification and problem solving, teamwork.

Metode poučevanja in učenja:

Predavanja, računalniške vaje, projektni način dela pri seminarjih.

Learning and teaching methods:

Lectures, computer-based workshops, project work, seminars.

Delež (v %) /

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Informacijska/računalniška varnost opisuje vse preventivne postopke in sredstva s katerimi zagotovimo dostop do informacijskih sistemov in njihove vsebine ter preprečimo njihovo nepooblaščeno uporabo. Med preventivnimi ukrepi nudi *criptografija* največjo varnost oziroma zaščito glede na svojo prilagodljivost digitalnim medijem in s tem predstavlja osnovo informacijske družbe (cilji: zasebnost, celovitost podatkov, digitalno overjanje/podpisovanje, digitalni denar, in drugi kriptografski protokoli; obseg: matematika, računalništvo, elektrotehnika, finance, politika, obramba, itd.).

Vsebina bo med drugim zajemala naslednje teme:

- **Simetrična kriptografija**
 - Klasični tajnopisi in zgodovina kriptografije
 - Kerckhoffov princip in stopnje napadov na kriptosisteme.
 - Shannonova teorija informacij in entropija (popolna, računska in dokazljiva varnost)
 - Bločne šifre (DES/IDEA, AES in finalisti, linearna in diferenčna analiza)
 - Tokovne šifre/PRNG (RC4, LFSR in Berlekamp-Masseyjev algoritem,...),

Content (Syllabus outline):

Information/Computer Security describes all preventive measures, procedures and means to ensure access to Information Systems and their contents in order to prevent their unauthorized use. Cryptography provides maximum security while at the same time preserve the flexibility of digital media. It forms the foundation of Information Society (objectives: privacy, data integrity, digital authentication/signatures, digital cash, and other cryptographic protocols; it covers Mathematics, Computer Science, Electrical Engineering, Finances, Policy, Defence, etc.). The course will cover the following topics:

- **Symmetric cryptography**
 - Classical Ciphers and History of Cryptography
 - Kerckhoff Principle and various attacks on cryptosystems
 - Shannon Theory of Information and Entropy (Perfect, Computational and Provable Security)
 - Block Ciphers (DES/IDEA, AES and finalists, Linear and Differential Analysis)
 - Stream Ciphers/PRNG (RC4, LFSR and Berlekamp-Massey algorithm,...),
 - Cryptoanalysis and Statistical Methods
 - Hash Functions (MD/SHA, HMAC, ...) and Authentication Codes (MAC), Birthday Paradox Attacks, new attacks,...

- Kriptoanaliza in statistične metode
- Zgoševalne funkcije (MD/SHA, HMAC, ...) in kode za avtentikacijo (MAC), napadi s paradoksom rojstnih dni, novi napadi,...
- **Kriptografija javnih ključev** oziroma asimetrična kriptografija
- Kriptosistemi z javnimi ključi, enosmerne funkcije in z njimi povezani problemi iz teorije števil (testiranje praštevilskosti, faktorizacija števil, diskretni logaritem)
- Digitalni podpisi (RSA, DSA, enkratni, slepi, skupinski, itd.)
- Protokoli za dogovor o ključu (Diffie-Hellman, ElGamal, Kerberos, STS)
- Sheme za identifikacijo oseb in naprav (izziv/odgovor, ...)
- Drugi protokoli (grb/cifra po telefonu, mentalni poker, sheme za deljenje skrivnosti, kode za overjanje, časovni žigi, vizualna kriptografija, dokaz brez razkritja znanja)
- Kvantna kriptografija
- **Računalniška varnost**
- Varnost programov (hrošči, virusi, zlonamerna koda)
- Varnost podatkovnih baz (anonimizacija)
- Varnost operacijskih sistemov (MS Win, Unix/Linux, liveCD)
- Varnost mrežnih komunikacij (požarni zidovi, VPN, IPsec, SSL)
- Zasebnost v računalništvu (žetoni/pametne kartice, RFID kartice)
- Upravljanje s ključi (certifikati, CA, PKI, X.509)
- Učinkovite in varne implementacije kriptosistemov (napadi s stranskim kanalom in obramba pred njimi)
- Upravljanje varnosti v praksi (varnostne politike, nadzor)
- Patenti in standardi (ISO, IEEE, IETF)

- **Public-key cryptography** (Asymmetric Cryptography)
 - Perfect Security (Computational, Unconditional and Provable Security)
 - Public-Key Cryptosystems, One-Way Functions and related problems in Number Theory (Primality Testing, Integer Factorization, Discrete Logarithm Problem)
 - Digital Signatures (RSA, DSA, one-time, blind, group etc.)
 - Key Agreement Protocols (Diffie-Hellman, ElGamal, Kerberos, STS)
 - Identification Schemes for humans and devices (challenge/response, ...)
 - Other protocols (head/tail over the phone, mental poker, Secret Sharing Schemes, Authentication Schemes, Timestamps, Visual Cryptography, Zero-Knowledge Proofs)
 - Quantum Cryptography
- **Computer and information security**
 - Security of programs (bugs, viruses, malicious code)
 - Security of databases (anonymization)
 - Security of OS (MS Win, Unix/Linux, liveCD)
 - Security of network communication (firewalls, VPN, IPsec, SSL)
 - Privacy in CS (tokens/smart cards, RFID cards)
 - Key management (certificates, CA, PKI, X.509)
 - Efficient and secure implementations of cryptosystems (sidechannel attacks and defenses against them)
 - Real time security management (security policy, monitoring)
 - Patents and standards (ISO, IEEE, IETF)

Temeljni literatura in viri / Readings:

D. Stinson, Cryptography: Theory and Practice, tretja izdaja, Chapman and Hall/CRC, 2006.

A. Menezes, P. van Oorschot in S. Vanstone, Handbook of Applied Cryptography, CRC Press, 1997 (peti ponatis 2001).

C.P. Pfleeger in S.L. Pfleeger, Security in Computing, četrta izdaja, Prentice Hall, 2006.

Cilji in kompetence:

Študent se spozna z osnovami kriptografije in računalniške varnosti.

Objectives and competences:

Introduction to Cryptography and Computer Security.

Predvideni študijski rezultati:

Znanje in razumevanje: Študent razume osnovne probleme računalniške varnosti in v podrobnosti delovanje najbolj znanih kriptosistemov sistemov ter je sposoben povezovati obe področji, predlagati rešitve in implementirati oziroma vzdrževati kriptografske sisteme.

Uporaba: Sposobnost opredelitev (definicije) problema, pravilno ovrednotenje s strokovnega vidika (tako s kriptografskega kot varnostnega) ter sposobnost predlagati/ovrednotiti učinkovito rešitev.

Refleksija: Spoznavanje in razumevanje ugašenosti med teorijo in njenim rabo na konkretnih primerih računalniške varnosti.

Prenosljive spremnosti - niso vezane le na en

predmet: Predmet je osnova za številne predmete, ki preučujejo računalniške sisteme in mreže, (tele)komunikacijo, digitalno forenziko, elektronsko in mobilno poslovanje,... Med pridobljene spremnosti štejejo teoretične osnove za inženirsko reševanje različnih praktičnih problemov, ki se pojavljajo v problemih iz računalniške varnosti in kriptografije.

Intended learning outcomes:

Knowledge and understanding: Student masters the basic problems of computer security and the detailed structure of the most famous cryptosystems. Student is able to connect these areas, propose specific solutions and implement or maintain cryptosystems.

Application: The ability to define the problem, correct evaluation of a professional point of view (such as the cryptographic security) and the ability to propose/evaluate an effective solution.

Reflection: Learning and understanding the soundness between theory and practice applied to specific examples of computer security.

Transferable skills: This course is a foundation for several courses that study computer systems and networks, telecommunications, digital forensic, electronic and mobile commerce etc. Student will attain theoretical foundation for variety of practical problems that are encountered in the field of computer security and cryptography.

Metode poučevanja in učenja:

Predavanja, vaje, domače naloge, seminarji, konzultacije, laboratorijsko delo. Poseben poudarek je na sprotnjem študiju in na skupinskem delu pri vajah in seminarjih. Ogledali si bomo tudi kakšen video.

Learning and teaching methods:

Lectures, tutorials, assignments, seminars, office hours, lab work. There will be a special emphasis on real-time studies and team work (tutorials and seminars). We will occasionally watch a video material related to the course material.

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt): Sprotno preverjanje (domače naloge, kolokviji in projektno delo) Končno preverjanje (pisni in ustni izpit) Ocene: 6-10 pozitivno, 5 negativno (v skladu s Statutom UL).	50% 50%	Type (examination, oral, coursework, project): Continuing (homework, midterm exams, project work) Final (written and oral exam) Grading: 6-10 pass, 5 fail (according to the rules of University of Ljubljana).

Vaje / Tutorial: slovenščina in angleščina
Slovene and English

Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

Predavanja:

Vsebina predmeta se prilagaja trenutno aktualnim trendom na področju razvoja programske opreme. Trenutno je prilagojena obravnavi agilnih metod in empiričnemu ovrednotenju njihove učinkovitosti:

1. Pregled značilnosti agilnih metod za razvoj programske opreme
2. Vodenje agilnih projektov razvoja programske opreme
 - iterativen in inkrementalen razvoj
 - metoda Scrum
3. Tipične prakse ekstremnega programiranja
 - Programiranje v parih
 - Testno voden razvoj programske opreme
 - Sprotno preoblikovanje kode (refactoring)
 - Orodja za podporo testno vodenemu razvoju in preoblikovanju kode
4. Pomanjkljivosti ekstremnega programiranja
5. Kanban in vitek razvoj programske opreme
6. Metrike v programski opremi in merjenje učinkovitosti razvojnega procesa
7. Študija primera: empirično ovrednotenje posameznih praks iz točk 2 in 3
8. Primerjava agilnega pristopa z modeli za discipliniran razvoj programske opreme (Personal Software Process, Team Software Process, Capability Maturity Model)

Vaje:

Namen vaj je dvojen:

1. seznanjanje s sodobnimi orodji za razvoj programske opreme;
2. empirično ovrednotenje posameznih pristopov k razvoju programske opreme na podlagi praktičnega dela na projektih, ki so čim bolj podobni realnim.

Delo izven kontaktnih ur:

Študenti razvijajo programe, ki so sestavni del projekta, ki služi kot osnova za študijo primera.

Lectures:

The contents adapts to current trends in software development. At the moment the focus is on agile methods for software development and empirical evaluation of these methods:

1. Overview of agile methods for software development and their characteristics
2. Agile software project management
 - Iterative and incremental development
 - Scrum
3. Typical Extreme Programming practices
 - Pair programming
 - Test driven development (TDD)
 - Refactoring
 - Software tools that support TDD and refactoring
4. Weaknesses of Extreme Programming
5. Kanban and lean software development
6. Metrics in Software Engineering and measuring the effectiveness of the software development process
7. Case study: Empirical evaluation of the aforementioned practices
8. Comparison of agile approach to traditional disciplined software development processes (Personal Software Process, Team Software Process, Capability Maturity Model)

Lab practice:

The purpose of lab practice is twofold:

1. to acquaint students with modern software development tools;
2. to empirically evaluate different approaches to software development through practical work on (almost) real software projects.

Individual work outside of contact hours:

Students develop programs that are part of the project that serves as a case study.

Temeljni literatura in viri / Readings:

1. K. Schwaber: Agile Project Management with Scrum, Microsoft Press, 2004.
2. K. Beck: Extreme Programming Explained, Addison-Wesley, več izdaj.
3. D. Anderson, Kanban – Successful Evolutionary Change for Your Technology Business, Sequim, WA: Blue Hole Press, 2010.
4. K. Beck: Test-Driven Development: By Example, Addison-Wesley, 2003.
5. M. Cohn: User stories applied, Addison-Wesley, 2004.

Dodatna literatura:

1. B. Boehm, R. Turner: Balancing Agility and Discipline – A Guide for the Perplexed, Pearson Education, 2004.
2. CMMI for Development (CMMI-DEV), Version 1.2. CMU/SEI-2006-TR-008, Software Engineering Institute, Carnegie Mellon University, 2006.

Cilji in kompetence:

Cilj predmeta je poglobljena obravnava sodobnih (trenutno aktualnih) metod razvoja programske opreme v primerjavi z že uveljavljenimi pristopi. Študenti delajo na obsežnejšem projektu, ki služi kot študija primera za ovrednotenje novih pristopov, da bi ugotovili njihove prednosti in pomanjkljivosti.

Predvidene kompetence:

- sposobnost opredelitve, razumevanja in reševanja kreativnih strokovnih izzivov na področju računalništva in informatike;
- sposobnost uporabe pridobljenega znanja pri samostojnem delu za reševanje tehničnih in znanstvenih problemov na področju računalništva in informatike; sposobnost nadgradnje pridobljenega znanja,
- sposobnost skupinskega dela v profesionalnem delovnem okolju; vodenje manjše strokovne skupine;
- sposobnost administrativnega vodenja procesov, povezanih z raziskovanjem, industrijo, izobraževanjem in drugimi področji;
- sposobnost razumevanja in uporabe znanja računalništva in informatike na drugih tehničnih in relevantnih področjih (ekonomija, organizacijske vede ipd.);

Objectives and competences:

In depth treatment and empirical evaluation of modern software development methods in comparison to traditional approach. Students work on a project that serves as a case study for evaluation of modern approaches in order to find their strengths and weaknesses.

The competences students gain are:

- the ability to define, understand and solve creative professional challenges in computer and information science;
- the ability to apply acquired knowledge in independent work for solving technical and scientific problems in computer and information science; the ability to upgrade acquired knowledge.
- the ability of teamwork within the professional environment; management of a small professional team;
- the ability for administrative management of processes related to research, industry, education and other fields;
- the ability to understand and apply computer and information science knowledge to other technical and relevant fields (economics, organisational science, etc.);
- practical knowledge and skills of computer hardware, software and information technology

- praktično znanje in spretnosti, potrebne za uspešno strokovno delo na področju računalništva in informatike;
- samostojno reševanje zahtevnih razvojnih, inženirskev in organizacijskih nalog kot tudi povprečno zahtevnih raziskovalnih nalog na področju računalništva in informatike.

- necessary for successful professional work in computer and information science;
- independently tackle demanding developmental, engineering, and organisational tasks as well as moderately demanding research tasks in their fields of study.

Predvideni študijski rezultati:

Poznavanje in razumevanje:

- sodobnih pristopov k razvoju programske opreme
- ključnih faktorjev, ki vplivajo na uspešnost tovrstnih projektov
- pomena empiričnega spremeljanja razvojnega procesa.

Uporaba: Uporaba obravnavanih metod in orodij pri delu na konkretnem projektu.

Refleksija: Razumevanje okoliščin, ki vplivajo na potek razvoja programskih sistemov.

Prenosljive spretnosti - niso vezane le na en

predmet: Sposobnost za skupinsko delo, vodenje, načrtovanje in organizacijo, medsebojno komuniciranje, pisno in ustno poročanje.

Intended learning outcomes:

Knowledge and understanding of:

- modern approaches to software development
- key factors that affect the success of software development projects
- the importance of empirical evaluation of the software development process

Application: Application of modern software development methods and tools within the framework of an (almost) real software development project.

Reflection: Understanding all the disparate issues affecting the implementation.

Transferable skills: Increase in professional skills like team-work, management, planning and organization, written and oral communication.

Metode poučevanja in učenja:

Predavanja z aktivno udeležbo študentov (razlaga, diskusija, primeri, reševanje problemov). Laboratorijske vaje s praktičnim delom na večjem projektu, ki služi kot študija primera za ovrednotenje posameznih pristopov k razvoju programske opreme.

Learning and teaching methods:

Lectures with active participation on the part of students (discussion, examples, problem solving). Lab practice requires practical work on an almost real project that serves as a case study for evaluation of different approaches to software development.

Vaje / Tutorial: slovenščina, angleščina
Slovene, English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Predavanja:

3D modeliranje

1. poligonske mreže, večločljivostne mreže, poenostavitev, optimizacija
2. parametrične ploskve, pretvorba v poligone
3. implicitne ploskve in polne predstavitev
4. točkovne predstavitev, pretvorba v ploskovne

Upodabljanje

1. osnove fotometrije in radiometrije, osvetljevanje, odsevanje
2. napredni modeli osvetljevanja in odsevanja, BRDF, pod površinsko razprševanje
3. globalna osvetlitev: enačba upodabljanja, modeli za reševanje
4. Monte Carlo sledenje poti, Metropolis light transport, pomnenje obsevanosti, mapiranje fotonov
5. nefotorealistično upodabljanje
6. upodabljanje s slikami

Animacija

1. interpolacija, kinematika

Content (Syllabus outline):

Lectures:

3D modeling

1. polygon meshes, multiresolution meshes, simplification, optimization
2. parametric surfaces, mesh conversion
3. implicit surfaces, solids
4. point based representations, mesh reconstruction

Rendering

1. foundations of radio- and photometry, lighting, reflection
2. advanced lighting models, BRDF, subsurface scattering
3. global illumination: rendering equation, models for solutions
4. Monte Carlo path tracing, Metropolis light transport, irradiance caching, photon mapping
5. non-photorealistic rendering
6. image-based rendering

Animation

1. interpolation, kinematics

2. zajem gibanja: urejanje gibanja, predelava gibanja, iskanje, segmentacija in klasifikacija
3. dinamika: sistemi delcev in vzmeti, animacija tekočin, toga telesa, mehka telesa
4. simulacija množic
5. obrazna animacija

Znanstvena vizualizacija

1. upodabljanje s konturami in izoploskvami
2. metanje žarkov za volumetrično upodabljanje
3. upodabljanje v prostoru predmetov
4. vizualizacija vektorskih polj, tekočin, advekcija tekstur

Vaje:

Laboratorijski projekti, na katerih študenti implementirajo lastne rešitve za vizualizacijo in animacijo 3D predmetov.

2. motion capture: editing, retargeting, search, segmentation and classification
3. dynamics: particle and mass-spring systems, animation of fluids, rigid bodies, deformable models
4. crowd simulation
5. facial animation

Scientific Visualization

1. contour and isosurface rendering
2. ray casting for volumetric rendering
3. model-space rendering
4. visualization of vector fields, liquids, texture advection

Laboratory:

Laboratory projects, where students implement their own solutions for visualization and animation of 3D models.

Temeljni literatura in viri / Readings:

1. Matt Pharr and Greg Humphreys: *Physically Based Rendering: From Theory To Implementation*. Morgan Kaufmann, Second Edition, 2010
2. Mario Botsch, Leif Kobbelt, Mark Pauly, Pierre Alliez, Bruno Levy: *Polygon Mesh Processing*. CRC Press, 2010
3. Rick Parent: *Computer Animation: Algorithms and Techniques*. Morgan Kaufmann, 3. edition 2012.
4. John Hughes , Andries van Dam, Morgan McGuire, David F. Sklar, James D. Foley, Steven K. Feiner, Kurt Akeley: *Computer Graphics: Principles and Practice*. Addison-Wesley Professional; 3. edition, 2013

Cilji in kompetence:

Cilj predmeta je, da študenti razumejo matematične in fizikalne aspekte in algoritme, ki so podlaga modernih pristopov v računalniški grafiki (teoretična podlaga), ter da jih znajo aplicirati v svoje programske rešitve (praksa).

Študenti bodo pridobili naslednje kompetence:

- Zmožnost kritičnega, analitičnega in sintetičnega razmišljanja

Objectives and competences:

The objective of the course is that students gain understanding of mathematical, physical and algorithmic aspects that are the basis of modern approaches in computer graphics (theory) and that they can apply them to their own software solutions (practice).

When completing the course, students will gain the following competences:

- Zmožnost definiranja, razumevanja in reševanja ustvarjalnih profesionalnih izzivov v računalništvu in informatiki
- Sposobnost profesionalnega komuniciranja v materinem in tujem jeziku
- Sposobnost uporabe pridobljenega znanja za reševanje tehničnih in znanstvenih problemov v računalništvu; sposobnost nadgrajevanja pridobljenega znanja.
- Kompetence na področju računalništva in informatike, ki omogočajo nadaljevanje študija na tretji stopnji.

- Developing skills in critical, analytical and synthetic thinking
- The ability to define, understand and solve creative professional challenges in computer and information science
- The ability of professional communication in the native language as well as a foreign language
- The ability to apply acquired knowledge in independent work for solving technical and scientific problems in computer and information science; the ability to upgrade acquired knowledge
- Competences in computer and information science granting access to further study at 3rd cycle doctoral programmes

Predvideni študijski rezultati:

Znanje in razumevanje:

Poznavanje algoritmov in metodologij za uporabo in razvoj naprednih sistemov za 3D upodabljanje in animacijo.

Uporaba:

Razvoj lastnih grafičnih programov za upodabljanje, animacijo in simulacijo.

Refleksija:

Spoznavanje in razumevanje uglašenosti med teorijo in njeno aplikacijo na konkretnih primerih s področja računalniške grafike.

Prenosljive spremnosti - niso vezane le na en

predmet:

Reševanje drugih konceptualno sorodnih problemov na osnovi algoritmov računalniške grafike.

Intended learning outcomes:

Knowledge and understanding:

Understanding of algorithms and methodologies for use and development of advanced 3D rendering and animation systems.

Application:

Development of own solutions for rendering, animation and simulation.

Reflection:

Understanding how the theory can be tuned for different application scenarios in the area of computer graphics.

Transferable skills:

Solving other conceptually similar problems based on the computer graphics algorithms.

Metode poučevanja in učenja:

Learning and teaching methods:

Predavanja s praktičnimi demonstracijami, izvajanje laboratorijskega projekta pod mentorstvom asistenta.	Lectures with practical demonstrations, laboratory work under the supervision of assistants.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

--	--

Vsebina:

Content (Syllabus outline):

Predavanja: <ul style="list-style-type: none"> a) Uvod v numerično računanje (osnove numeričnih napak in stabilnost numeričnih algoritmov); b) Linearna algebra: sistemi linearnih enačb (direktne in iterativne metode), lastne vrednosti matrik (inverzna in QR iteracija); c) Interpolacija in aproksimacija (Lagrangeva in Newtonova interpolacija, metoda najmanjših kvadratov, trigonometrična aproksimacija); d) Numerično integriranje (Newton-Cotesove formule, Rombergova metoda, Gaussove integracijske formule, ocenjevanje napake in izbira koraka, numerično računanje odvodov); 	Lectures: <ol style="list-style-type: none"> 1. Introduction to numerical computing (numerical errors and stability of numerical algorithms); 2. Linear algebra: systems of linear equations (direct and iterative methods). Matrix eigenvalues (inverse and QR iteration); 3. Interpolation and approximation (Lagrange and Newton interpolation formulas, least squares method, trigonometric approximation); 4. Numerical integration (Newton-Cotes formulas, Romberg integration, Gauss integration formulas, error estimation and step-size selection, numerical differentiation);
---	--

e) Reševanje diferencialnih enačb (osnovne eno- in več-stopenjske metode, stabilnost, enačbe višjih redov, sistemi diferencialnih enačb, robni problemi), parcialne diferencialne enačbe (metode končnih diferenc, končnih elementov in spektralne metode).

Vaje:

Pri vajah bodo študentje s pomočjo numeričnih metod reševali različne (uporabne) probleme.

Domače naloge:

Z domačimi nalogami bodo študentje preverjali in s samostojnim delom utrdili doseženo znanje.

5. Ordinary differential equations (basic one- and multistep formulas, stability, higher order equations, systems of differential equations, boundary value problems), partial differential equations (finite difference, finite element and spectral methods).

Tutorials: Tutorials will illustrate and/or expand concepts presented in lectures by working through (real life) example problems.

Homeworks: Homeworks are essential part of the course. With homeworks the students will test and upgrade their knowledge.

Temeljni literatura in viri / Readings:

Obvezna literatura: Bojan Orel: Osnove numerične matematike

Dodatna literatura:

- 28.K. Atkinson: Elementary Numerical Analysis
- 29.S. D. Conte & C. de Boor: Elementary Numerical Analysis
- 30.B. N. Datta: Numerical Linear Algebra and Applications

Cilji in kompetence:

Cilj predmeta je študentom računalništva in informatike predstaviti osnovne metode numerične matematike in jih usposobiti za samostojno reševanje numeričnih problemov, ki jih bodo lahko srečali pri svojem strokovnem delu.

Objectives and competences:

This course explores the basic methods of numerical mathematics. Successful students will be able to solve numerical problems they will encounter in their work.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje osnovnih numeričnih metod, njihovih prednosti in slabosti.

Uporaba: Sposobnost uporabe numeričnih metod pri reševanju problemov iz strokovnega dela.

Intended learning outcomes:

Knowledge and understanding: Knowledge of basic numerical methods, their advantages and weaknesses.

Application: Ability to use numerical methods for problem solving.

Refleksija: Spoznanje, da so računalniške simulacije sestavni nujna sestavina raziskovalnega dela (poleg eksperimentov in teorije).

Prenosljive spremnosti - niso vezane le na en

predmet: Sposobnost prenašanja sistematičnega pristopa k analizi problema na druga področja.

Reflection: Discovery that computer simulations are necessary ingredient of research work (besides experiments and theory).

Transferable skills: Ability to transfer systematic approach to numerical problem solving to other problems.

Metode poučevanja in učenja:

Predavanja, laboratorijske vaje in domače naloge.
Poudarek na samostojnem reševanju problemov.

Learning and teaching methods:

Lectures, (hands-on) tutorials and homeworks.

Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

Pri predmetu Interaktivnost in oblikovanj informacij bodo obravnavani celostni pristopi k oblikovanju informacij in oblikovanju interaktivnosti. Poudarek bo na računskih pristopih k vidnemu sporočanju ter na razvoju interaktivnih rešitev, produktov in vmesnikov v hipermedijskih okoljih. Oblikovanje informacij in oblikovanje interaktivnosti sta kontekstualizirani kot bistveni komponenti uporabniške izkušnje, ki v velikem delu determinira uporabnost informacijske storitve ali produkta.

Vsebina predmeta:

Oblikovanje informacij:

Modeli vidnega zaznavanja

Oblikovanje vidnih sporočil

Predstavitev informacije

Prikaz informacije

Prikazne tehnologije

Navigacija in interaktivnost

Interaktivno oblikovanje:

Uporabniška izkušnja

Konceptualni modeli interaktivnosti

Kognitivni vidik interaktivnosti

Kognitivni model uporabnika

Kolaborativni in socialni vidiki

Interaktivne tehnologije

Razvojni proces interaktivnih rešitev

Vrednotenje uporabnosti

Vaje:

Poudarek bo na razvoju in vrednotenju interaktivnih hipermedijskih rešitev. Študentje bodo v ustrezeno opremljenem laboratoriju zasnovali in razvili več prototipov z uporabo programskeh orodij za grafično procesiranje in obdelavo podatkov, ki so primerni za podporo prototipno osnovanemu razvojnemu ciklu. Poleg programskeh orodij bodo pri delu uporabljeni tudi senzorji, interaktivni vmesniki ter elektronske

The course is dedicated to a holistic perspective on information and interaction design. Emphasis will be given to computational aspects of visual messaging and development of interactive solutions, products and interfaces in hypermedia environments. Information and interaction design are considered as principal components of user experience that determines the usability of information services and products.

Syllabus outline:

Information design:

Models of visual perception

Design of visual messages

Presentation of information

Display of information

Display technologies

Navigation and interactivity

Interaction design:

User experience

Conceptual models of interactivity

Cognitive perspective on interactivity

Cognitive models of users

Collaborative and social aspects

Interaction technologies

Development process of interactive solutions

Usability assessment

Laboratory work centeres around the development and evaluation of hypermedia solutions. Students will design and develop a series of prototypes using various software tools for fast development. Beside software tools, sensors, interactive interfaces and electronic devices are used. Collaboration with students of new media at the Academy of Fine Arts at University of Ljubljana is organized.

komponente. Predvideno je tudi sodelovanje podiplomskih študentov Akademije za likovno umetnost in oblikovanje.

Temeljni literatura in viri / Readings:

- Helen Sharp, Interaction design, Wiley, 2006.
- Robert Spence, Information visualization: Design for Interaction, 2007.
- Ben Fry, Visualizing Data, O.'Reilly, 2008.

Cilji in kompetence:

Cilj predmeta je študente naučiti oblikovanja in podajanja informacij ter oblikovanja interaktivnosti s poudarkom na razvoju uporabniško in podatkovno osredotočenih multimedijskih programskih rešitev.

Objectives and competences:

To teach the design and presentation of information with emphasis on interactivity based on user and data centered multimedia software solutions.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje in razumevanje računskih modelov zaznavanja ter njihove implementacije v umetnih kognitivnih sistemih. Znanje snovanja praktičnih rešitev s področja umetnega zaznavanja v kognitivnih sistemih.

Uporaba: Snovanje in implementiranje praktičnih rešitev s področja umetnega zaznavanja v kognitivnih sistemih, npr. v avtonomnih robotih, nadzornih sistemih, inteligentnih okoljih ali mobilnem računalništvu. Raziskovalno in izobraževalno delo na tem področju.

Refleksija: Spoznavanje in razumevanje širšega raziskovalnega področja umetnega in naravnega zaznavanja ter kognitivnih sistemov.

Intended learning outcomes:

Knowledge and understanding: Comprehension of basic principles and methods of interaction design, information design and assessment of usability. Emphasis is on creativity and search for unconventional solutions.

Application: Development of user experience and development of new ways of conveying and accessing information on the Internet, in new media and on different scientific areas.

Reflection: Wholesome comprehension of functional, cognitive, economic and social aspects of interaction design.

Transferable skills: Multidisciplinary research, use of software and hardware tools, identification and

Prenosljive spretnosti - niso vezane le na en predmet: Sposobnost samostojnega in multidisciplinarnega raziskovanja na osnovi strokovne literature in eksperimentalnega dela. Sposobnost programiranja senzorskih ali robotskev sistemov.	solving of problems, work and communication in teams.
--	---

Metode poučevanja in učenja:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: Vpis predmeta Uvod v odkrivanje znanj iz podatkov iz predhodnih semestrov.	Prerequisites: The following subject from previous semesters Introduction to Data Mining.
--	--

Vsebina:	Content (Syllabus outline):
-----------------	------------------------------------

Predmet bo v teoriji in na praktičnih primerih predstavil sledeče vsebine:

1. Predstavitev področja in klasifikacija tehnik za odkrivanje znanj iz podatkov, pregled značilnih aplikacij
2. Tehnološke platforme in razvojne metodologije (skriptna okolja, okolja za analizo podatkov z vizualnim programiranjem)
3. Predobdelava podatkov: iskanje osamelcev, zmanjševanje dimenzij (metoda glavnih komponent), izbor in konstrukcija značilk, permutacijski pristopi, diskretizacija
4. Uvrščanje v skupine, s poudarkom na tehnikah, ki lahko obravnavajo velike množice podatkov in podatkov z velikim naborom značilk, metode podpornih vektorjev, iskanje in vizualizacija interakcij
5. Tehnike razvrščanja v skupine (metode hierarhičnega združevanja, metode voditeljev), s poudarkom na tehnikah, ki lahko obravnavajo velike množice podatkov, določanje števila skupin (metoda silhuete)
6. Ocenjevanje uspešnosti napovednih modelov, kalibracijske in diskriminantne metode, ROC analiza, permutacijski pristopi
7. Vizualizacija podatkov in modelov, tehnike gradnje, analize in vizualizacije mrež
8. Tehnike odkrivanj znanj iz zbirk besedil in spletnih strani
9. Integrativni pristopi (uporaba predznanja, integracija povezav, pridobljenih iz različnih naborov podatkov)
10. Tipične napake pri snovanju pristopov ali uporabi tehnik odkrivanja znanj iz podatkov in kako se jim izognemo

Na predavanjih bodo študenti spoznavali ključne tehnologije in orodja, s katerimi bodo tekom semestra na vajah in v okviru projektov oz. seminarских nalog reševali praktične probleme. Poudarek bo na uporabi odprtakodnih, prostostopnih orodij, ki za analizo podatkov

The course will cover theoretical and practical aspects of the following data mining approaches:

1. Introduction to data mining, taxonomy of data mining approaches and tasks
2. Data mining programming environments (scripting, visual programming)
3. Data preprocessing (dimensionality reduction, feature construction, identification of outliers)
4. Classification, including support vector machines and feature interaction discovery
5. Clustering, with emphasis on techniques that can consider very large data sets, and techniques for to determine an appropriate number of clusters
6. Evaluation, including permutation-based and cross-validation approaches, statistical scoring of models
7. Data and model visualization techniques, visualization of networks
8. Text mining, text-based kernels for support vector machines
9. Integrative aspects, including ensemble methods and mining with inclusion of prior knowledge
10. Typical mistakes in data mining and how to avoid them

The course will be composed of lectures in core data mining techniques and tools, which will then be employed on practical problems during lab work. We will focus on open source solutions and modern scripting languages (e.g., Python). Students will use scripting to access various data mining techniques which they, in a programming framework, will combine into their own data mining procedures.

uporabljajo moderne skriptne jezike (npr. Python). V skriptnih okoljih bodo študenti z uporabo že obstoječih komponent razvijali lastne metode, uporabo teh preverjali na različnih podatkih, ter poročali o ocenah njihove uporabnosti in napovedne točnosti. Vaje se bodo izvajale v računalniški učilnici opremljeni z ustrezno strojno in programsko opremo.

Temeljni literatura in viri / Readings:

1. Tan P-N, Steinbach M, Kumar V (2006) Introduction to data mining. Pearson Education, Boston.
2. Dokumentacija okolja za odkrivanje znanj iz podatkov Orange, prosto dostopna na spletnih straneh www.ailab.si/orange/doc.

Cilji in kompetence:

Cilj predmeta je študente seznaniti z osnovnimi in naprednimi metodami odkrivanja znanj iz podatkov, s poudarkom na njihovi praktični uporabi. Pri predmetu se bodo naučili uporabljati moderna skriptna orodja za analizo podatkov. Spoznali bodo, kako je z njimi moč implementirati nove metode za odkrivanje znanj, oziroma kako je moč obstoječe tehnike prilagoditi za obravnavo konkretnih podatkov.

Objectives and competences:

Students will learn a number of core techniques for data mining. The course will include an introduction to data mining as well as a detailed study of several selected methods. It will also focus on practical use of these methods on real-life problems. The course will use a scripting data mining environment, where students will learn how to use the existing data mining libraries and design and implement in code their own data mining solutions.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje metod in orodij odkrivanja znanj iz podatkov, uporaba teh v skriptnih okoljih, poznavanje načinov gradnje sistemov za analizo podatkov iz obstoječih komponent za vizualizacijo, statistiko in strojno učenje.

Uporaba: Uporaba tehnik odkrivanja znanj iz podatkov na praktičnih primerih s področja družboslovja, tehnike in biomedicine.

Refleksija: Razumevanje primernosti teoretičnih metod za reševanje praktičnih primerov ter njihovih omejitev, sposobnost analitičnega razmišljanja, sposobnost analize in reševanja

Intended learning outcomes:

Knowledge and understanding: Knowledge of methods and tools for data mining, their utility within modern data mining suites, engineering skills to construct (develop in code) data mining process from existing data analysis components.

Application: Application of data mining methods and tools on real-life data.

Reflection: Which are appropriate practical applications of theoretical methods of data analysis? What are their limitations? How can intelligent data analysis systems be used in practice?

Transferable skills: Students will be able to combine the knowledge from other courses that cover

praktičnih problemov z razvojem inteligentnih sistemov.

Prenosljive spremnosti - niso vezane le na en

predmet: Kombiniranje znanj pridobljenih pri predmetih Strojnega učenja in Umetna inteligenco. Spremnosti iskanja in uporabe domače in tuje literature, uporaba primerne (predvsem odprtakodne) programske opreme, identifikacija in reševanje kompleksnih problemov.

machine learning and artificial intelligence. The course will require students to acquire skills in literature search and search for existing algorithmic solutions and code snippets, and engineering skills for solving real-life complex problems.

Metode poučevanja in učenja:

Predavanja s podporo avdio-vizualne opreme, sprotni razvoj programskih rešitev, laboratorijske vaje v računalniški učilnici z ustrezno programsko opremo. Delo posamezno in v skupinah. Velik poudarek na praktičnem delu (npr. razvoj skript za pregledovanje in analizo podatkov) in reševanju praktičnih problemov.

Learning and teaching methods:

Combined lecturing with simultaneous use of the blackboard and computer projection (coding, visualization of models, results). Lab work in computer-equipped lecture rooms. Individual and work in team. Emphasis on practical problem solving.

Nosilec predmeta / Lecturer:

prof. dr. Denis Trček

Jeziki /

Predavanja / Lectures: slovenščina in angleščina
Languages: Slovene and English

Languages:

Vaje / Tutorial: slovenščina in angleščina
Slovene and English

Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:

Prerequisites:

(Empty box)

(Empty box)

Vsebina:

Content (Syllabus outline):

- Uvodni pregled področja.
- Ključne organizacije in standardi (ISO, ITU-T, IETF, W3C, OASIS, OMA).
- Varnostni mehanizmi in varnostne storitve (principi in praktične izvedbe overjanja, zaupnosti, celovitosti, nezatajljivosti, nadzora dostopa, beleženja in alarmiranja), infrastruktura javnih ključev (časovna normala, upravljanje imenskega prostora, operativni protokoli), osnove kvantnega procesiranja (kvantna izmenjava ključev).
- Infrastruktura za overjanje, avtorizacijo in nadzor (principi, primeri standardiziranih rešitev – RADIUS in Diameter).
- Varovanje na fizičnem in linijskem sloju (protokoli WEP, WPA1 in WPA2).
- Varovanje na mrežnem, transportnem in aplikacijskem sloju, vključno z internetom stvari in računalništvom v oblaku (protokoli IPSec, TLS, S/MIME, SET, XMLSec, SAML, XACML, WS-*).
- Formalne metode (taksonomija formalnih metod in primeri kot so metoda R. Rueppela, logika BAN).
- Obvladovanje zasebnosti (senzorske mreže, rešitve RFID) in obvladovanje zaupanja ter ugleda v storitvenih arhitekturah.
- Varnostno usmerjeno programsko inženirstva (prverjanje modelov).
- Obvladovanje tveganj pri varovanju informacijskih sistemov, organizacijski pristopi ter obvladovanje človeškega dejavnika (varnostne politike, modeliranje človeškega dejavnika in simulacije).
- Akreditacijski in nadzorno-revizijski postopki varnosti informacijskih sistemov (ISO 2700X, CISSP) ter evalvacijski postopki za zagotavljanje varnosti strojno-programskeih komponent (Common Criteria).
- Temeljna zakonodaja (direktive EU in nacionalne implementacije).
- Zaključki.
- Addendum: Mini vložki s praktičnim delom, ki pokrivajo najnovejše trende.

- Introduction.
- Key standards and organizations (ISO, ITU-T, IETF, W3C, OASIS, OMA).
- Security mechanisms, security services (principles and practical implementations of authentication, confidentiality, integrity, non-repudiation, access control, logging and alarming), public key infrastructure (time base, name space management, operational protocols), quantum computing basics (quantum key exchange).
- Authentication, authorization and accounting infrastructure (principles, examples of standardized solutions like RADIUS and Diameter).
- Security of physical and data layers (example protocols are WEP, WPA1 and WPA2).
- Security of network, transport and application layers, including internet of things and clouds (example protocols are IPSec, TLS, S/MIME, SET, XMLSec, SAML, XACML, WS-*).
- Formal methods (taxonomy of formal methods, examples like R. Rueppel's method, logic BAN).
- Privacy management and privacy by design (sensor networks, RFID systems) with trust management and reputation management basics in services oriented architectures.
- Secure programming (model checking).
- Risk management in IS, organizational views and human factor views (security policies, human factor modelling and simulations).
- Accreditation and auditing of IS related to security (ISO 2700X, CISSP), and standards for technical implementations of hardware and software components (Common Criteria).
- Basic legislation in the area of IS security and privacy (EU directives, national implementations).
- Comclusions.
- Addendum: Mini practical tasks covering the latest selected technological issues.

Temeljni literatura in viri / Readings:

- D. Trček: Information Systems Security and Privacy, Springer, New York, Heidelberg, 2006.
- D. Trček, Informacijska varnost in zasebnost, kopije prosojnic, FRI UL 2016-2017.

Cilji in kompetence:

Cilj predmeta je, da študentje aktivno osvojijo znanja varovanja omrežij in zasebnosti v sodobnih informacijskih sistemih in sicer za namen skrbništva (administracije), kot tudi namen razvoja novih rešitev.

Kategorizirane kompetence:

- Razvijanje sposobnosti kritičnega, analitičnega in sintetičnega razmišljanja.
- Sposobnost definiranja, razumevanja in reševanja kreativnih profesionalnih izzivov na področju računalništva in informatike.
- Sposobnost profesionalnega komuniciranja v materinem in tujem jeziku.
- Sposobnost biti skladen z varnostnimi, funkcionalnimi in okoljskimi zahtevami.
- Sposobnost razumevanja in uporabe znanja računalništva in informatike na drugih relevantnih področjih (ekonomija, organizacija, umetnost, itd.).
- Praktična znanja in sposobnosti na področju strojne in programske opreme ter informacijske tehnologije za uspešno profesionalno delo.

Objectives and competences:

The goal of the course is to educate students to be able to actively provide security and privacy in contemporary information systems, be it as systems administrators, or developers of new solutions.

Categorized competences:

- Developing skills in critical, analytical and synthetic thinking.
- The ability to define, understand and solve creative professional challenges in computer and information science.
- The ability of professional communication in the native language as well as a foreign language.
- Compliance with security, functional, economic and environmental principles.
- The ability to understand and apply computer and information science knowledge to other technical and relevant fields (economics, organisational science, fine arts, etc).
- Practical knowledge and skills of computer hardware, software and information technology necessary for successful professional work in computer and information science.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje principov varovanja računskih virov in podatkov (zasebnosti) v sodobnih globalnih informacijskih okoljih.

Uporaba: Aplikacija na nivoju skrbništva informacijskih sistemov in na nivoju razvoja ter raziskav področja varnosti in zasebnosti.

Intended learning outcomes:

Knowledge and understanding: Knowledge of the principles for protection of computing resources, data, and privacy in a modern global information environment.

Application: Administration of security and privacy IS solutions, and their development.

<p>Refleksija: Celostno razumevanje obvladovanja informacijske varnosti in zasebnosti.</p> <p>Prenosljive spremnosti - niso vezane le na en predmet: Predmet se navezuje na problematiko op. sistemov, računalniških komunikacij in poslovnega vidika obvladovanja informacijskih sistemov.</p>	<p>Reflection: Holistic understanding of information security and privacy.</p> <p>Transferable skills: The course is related to areas of operating systems, computer communications, and business views of IS security and privacy.</p>
---	---

Metode poučevanja in učenja:

Predavanja, vaje s projektnim delom (praktične prototipne implementacije), lastne predstavitev.

Udeležba na vajah je obvezna (zahtevan procent udeležbe se določi ob začetku študijskega leta).

Nosilec predmeta lahko določi obvezno udeležbo tudi na predavanjih.

Learning and teaching methods:

Lectures, laboratory work (with practical prototype implementations), students' presentations.

Attendance of laboratory work is mandatory (the exact percentage is announced at the beginning of a study year).

The lecturer may impose mandatory attendance of lectures.

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

<p>50 % ocene predstavlja sprotno delo študenta v obliki preverjanj na vajah (domače naloge, kvizi, praktičen projekt),</p> <p>50 % ocene pa predstavlja izpit, ki je načeloma v pisni obliki, lahko pa tudi v pisni in ustni obliku (pri čemer lahko nosilec namesto ustnega izpita uvede zagovor seminarja).</p> <p>Za uspešno opravljene obveznosti pri predmetu morata biti pozitivni obe delni oceni. Pristop k pisnemu izpitu je možen le po uspešno opravljenih obveznostih pri vajah (in v primeru dodatnih zahtev, ki se nanašajo na predavanja, po izpolnitvi teh).</p> <p>Ocene: 6-10 pozitivno, 5 negativno (v skladu s Statutom UL).</p>	<p>50%</p> <p>50%</p>	<p>50% of the final grade is obtained on the basis of on-going laboratory work (homeworks, quizzes, practical project implementations and presentations). The other 50% is obtained on the basis of a written exam, or written and oral exam (the lecturer may decide that a coursework replaces the oral exam).</p> <p>To be eligible for the written exam, a candidate must have successfully completed laboratory work, and fulfilled other obligations related to lecturing that the lecturer may have imposed. For successful completion of the course both grades have to be positive.</p> <p>Grading: 6-10 pass, 5 fail (according to the rules of University of Ljubljana).</p>

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: _____

Prerequisites: _____

Vpis v ustrezen letnik študija.

Enrolment in the relevant year of studies.

Vsebina:

Zaradi hitrih sprememb na tem področju se bo vsebina predmeta prilagajala razvoju:

1. Uvod v digitalno trženje
2. Značilnosti in vedenje porabnikov v digitalnem trženju
3. Digitalno trženje in tržensko raziskovanje
4. Izdelki in storitve v digitalnem trženju
5. Posebnosti oblikovanja cen v digitalnem trženju
6. Tržne poti v digitalnem trženju
7. Digitalno tržensko komuniciranje
8. Trženski odnosi v digitalnem trženju
9. Poslovni modeli digitalnega trženja
10. Trženski načrt za potrebe digitalnega trženja

Content (Syllabus outline):

Due to the rapid changes the course content will accommodate the development in this area:

1. Introduction to Digital Marketing
2. The characteristics and behavior of consumers in the digital marketing
3. The digital marketing and market research
4. Products and services in digital marketing
5. Special pricing in the digital marketing
6. Marketing channels in digital marketing
7. Digital Marketing Communications
8. Marketing relationships in the digital marketing
9. Business Models of Digital Marketing
10. The marketing plan for the needs of digital marketing

Temeljni literatura in viri / Readings:

Cilji in kompetence:

Objectives and competences:

<ul style="list-style-type: none"> - Seznaniti slušatelje z vplivom in možnostmi učinkovite uporabe novih tehnologij na področju trženja. - Spodbuditi h kritičnem vrednotenju informacijskih tehnologij in vpliva na veljavna prepričanja, paradigm ter strateške, operativne in taktične okvire trženja. - Poudariti strateški vidik in potencialno uporabo e-trženskih orodij za spremembo trženskih strategij. - Spodbuditi skupinsko delo s pomočjo uporabe najnovejših informacijskih tehnologij in uporabo pridobljenega znanja pri reševanju konkretnih problemov. - Seznaniti s konkretnimi primeri iz prakse digitalnega trženja. - Skozi vsebino in način dela pri predmetu poudariti tudi etični vidik in pri študentih spodbuditi občutljivost za vprašanja, ki jih človeku postavljajo tehnološki dosežki. 	<ul style="list-style-type: none"> - To acquaint students with the influence and the potential efficient use of new technologies in the field of marketing. - To support critical evaluation of information technologies and the impact on the existing beliefs, paradigms and the strategic, operational and tactical marketing frameworks. - To emphasize the strategic aspect and the potential use of e- marketing tools to change marketing strategies. - To encourage teamwork through the use of new information technologies and the application of acquired knowledge to solve specific problems. - To acquaint with concrete examples from practice of digital marketing. - Through the content and method of work of the course to emphasize the ethical aspect and stimulate the students' sensitivity to the issues raised by technological advancement.
--	---

Predvideni študijski rezultati:

Znanje in razumevanje:

- Razumevanje vpliva in možnostmi učinkovite uporabe novih tehnologij na področju trženja.
- Kritično vrednotenje informacijskih tehnologij in vpliva na veljavna prepričanja, paradigm ter strateške, operativne in taktične okvire trženja.
- Poznavanje strateškega vidika in potencialne uporabe e-trženskih orodij za spremembo trženskih strategij.
- Poznavanje orodij za reševanju konkretnih problemov s področja digitalnega trženja.
- Razumevanje etičnega vidika glede vprašanj, ki jih človeku postavljajo tehnološki dosežki.

Intended learning outcomes:

Knowledge and understanding:

- Understanding the impact and possibilities of efficient use of new technologies in the field of marketing.
- Critical evaluation of information technologies and the impact on the existing beliefs, paradigm and the strategic, operational and tactical marketing frameworks.
- Knowledge of strategic perspective and potential use of e-marketing tools to change marketing strategies.
- Knowledge of tools for solving specific problems in the field of digital marketing.
- Understanding the ethical point of view on the issues raised by human technological achievements.

Metode poučevanja in učenja:

Predavanja s sodelovanjem gostov iz prakse. Seminarji: Omogočajo poglabljanje znanj o digitalnem trženju. Študenti analizirajo študijske primere in razpravljajo o praktičnih trženjskih problemih. V skupinah skozi cel semester pripravljajo projekt oz. e-trženjski načrt na konkretnih primerih digitalnega trženja. Namen projekta je preverjanje razumevanja ključnih konceptov in orodij ter spodbujanje uporabe orodij za odkrivanje in reševanje poslovnih problemov. Projekt je pripravljen v pisni obliki (do 20 strani + priloge) in ustno predstavljen v okviru seminarjev (30 minut predstavitev + 15 minut diskusija). Primeri so obravnavani teoretično v okviru predavanj in praktično v okviru vaj. Skupinska priprava in zagovor seminarske naloge na eno od tem digitalnega trženja.

Learning and teaching methods:

Lectures: With the participation of guests from practice.
Seminars: They allow deepening knowledge of digital marketing. Students analyze case studies and discuss practical marketing problems. In groups throughout the semester they prepare a project (e-marketing plan) based on concrete examples from digital marketing. The project aims at verifying the understanding of key concepts and tools and promoting the use of tools to detect and solve business problems. The project is prepared in writing (up to 20 pages + annexes) and defended orally in the course seminars (30 minutes presentation + 15 minutes discussion). Examples are discussed in lectures and practical exercises. Block preparation and presentation of a seminar paper on one of the topics of digital marketing is required.

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt) Končno izpitno oceno tvorijo analiza študijskih primerov (do 40 točk) in projekt trženjskega načrta (do 60 točk). Sestava točk pri projektu e-trženjskega načrta: * Do 50 točk: pisna oblika strateškega trženjskega načrta * Do 10 točk: predstavitev načrta Seminar in študijski primer je treba opraviti v istem študijskem letu.		Type (examination, oral, coursework, project): The final exam grade includes the case study analysis (40 points) and project marketing plan (60 points). Composition of the points in the project e-marketing plan: * Up to 50 points: a written form of a strategic marketing plan * Up to 10 points: presentation of the plan The seminar and case study should be carried out in the same academic year.

Prerequisites:

**Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:**

Priporočamo solidno predznanje verjetnosti in statistike, programiranja, strojnega učenja in algoritmov.

Knowledge of probability and statistics, programming, machine learning, and algorithms is recommended.

Vsebina:

Vsebina predmeta temelji na izboru sodobnih statističnih tehnik obdelave naravnega jezika podkrepljenih s praktično rabo. V predavanjih predstavimo glavne pristope in pojasnimo delovanje posameznih metod in njihovo teoretično ozadje. V okviru laboratorijskih vaj znanje povežemo s praktično rabo in ga utrdimo z uporabo odprtakodnih sistemov za obdelavo naravnega jezika. Študenti rešujejo naloge, ki temeljijo na realnih raziskovalnih in praktičnih problemih, pretežno v slovenskem in angleškem jeziku.

1. Uvod: motivacija, razumevanje jezika, Turingov test, tradicionalni in statističen pristop.
2. Jezikovni viri: korpusi, slovarji, tezavri, omrežja in semantične baze, pregled orodij.
3. Lingvistika: fonologija in morfologija, sintaktična analiza, formalne gramatike.
4. Uporaba avtomatov in gramatik: avtomati in algoritmi za iskanje nizov, prepoznavanje sintakse, gramatično razčlenjevanje.
5. Oblikoslovno označevanje besedil: vrste oznak, lematizacija, ngrami, skriti markovski model, označevanje s pravili.
6. Računska in leksikalna semantika: predstavitev pomena, metode s pravili, leksikalna semantika.
7. Razvrščanje besedil in mera podobnosti: kosinusna razdalja, jezikovna omrežja in grafi, WordNet, vektorska predstavitev, uteževanje vektorjev, semantična korelacija.
8. Tekstovno rudarjenje: prilagojene klasifikacijske metode, metoda podpornih vektorjev na dokumentih, izbira atributov.

Content (Syllabus outline):

The syllabus is based on a selection of modern statistical natural learning techniques and their practical use. The lectures introduce the main tasks and techniques, explain their operation and theoretical background. During practical sessions and seminars the gained knowledge is applied to language practical task using open source tools. Student investigate and solve assignments, based on real-world research and commercial problems from English and Slovene languages.

1. Introduction to natural language processing: motivation, language understanding, Turing test, traditional and statistical approaches.
2. Language resources: corpuses, dictionaries, thesauruses, networks and semantic data bases, overview of tools.
3. Linguistics: phonology and morphology, syntactical analysis, formal grammars.
4. Using automata and grammars: automata and algorithms for searching strings, syntax parsing, dependency parsing.
5. Part-of-speech tagging: types of tags, lemmatization, ngrams, Hidden Markov model, rule-based tagging.
6. Computational and lexical semantics: semantic representations, rule-to-rule approaches, semantic role labelling.
7. Clustering words and text similarity measures: cosine distance, language networks and graphs, WordNet, vector representation, vector weighting, semantic correlation.
8. Text mining: adaptation of classification methods to the specifics of text, support vector machines for language, feature selection.

<p>9. Globoka omrežja in besedila: predstavitev besedil za uporabo v globokih nevronskih mrežah, avtoenkoderji, rekurzivne nevronске mreže.</p> <p>10. Povzemanje: predstavitve besedil, matrična faktorizacija, ekstrakcijske metode, povpraševane metode.</p> <p>11. Strojno prevajanje: jezikovni model, prevajalni model, poravnava jezikov, parametri modelov, izzivi v prevajanju.</p> <p>12. Dopolnjevanje besedil z drugimi viri informacij: heterogena omrežja, predstavitev word2vec, heterogeni ansamblji klasifikatorjev, analiza povezav.</p> <p>13. Metodologija in evalvacija pri obdelavi naravnega jezika.</p>	<p>9. Deep networks for text: document representations for deep neural networks, autoencoders, recurrent neural networks.</p> <p>10. Text summarization: text representations, matrix factorization, multi-document summarization, extractive methods, query based methods.</p> <p>11. Machine translation: language model, translation model, alignment model, challenges in machine translation.</p> <p>12. Augmenting text with other data sources: heterogeneous networks, word2vec representation, heterogeneous ensembles of classifiers, link analysis.</p> <p>13. Methodology and evaluation in NLP.</p>
---	--

Temeljni literatura in viri / Readings:

1. Jurafsky, David and Martin, James H. *Speech and Language Processing: An Introduction to Natural Language Processing, Computational Linguistics and Speech Recognition*, 2nd edition. Upper Saddle River, NJ: Prentice-Hall, 2009.
2. Aggarwal, Charu C., and Zhai, ChengXiang. *Mining text data*. Springer Science & Business Media, 2012.
3. Bird, Steven, Ewan Klein, and Edward Loper. *Natural language processing with Python*. " O'Reilly Media, Inc., 2009.

Cilji in kompetence:

Študenti se bodo naučili teorije in rabe osnovnih algoritmov in pristopov na področju obdelave naravnega jezika. Študenti bodo:

- razumeli pristope k analizi sintakse in semantike na področju obdelave naravnega jezika;
- razumeli pristope k povzemanju dokumentov;
- razumeli delovanje statističnih pristopov k strojnemu prevajanju,
- razumeli uporabo metod strojnega učenja v obdelavi naravnega jezika: skritega Markovskega modela, verjetnostnih kontekstno neodvisnih gramatik in algoritma EM,
- znali uporabiti orodja za obdelavo naravnega jezika.

Objectives and competences:

Upon completion of the course, students shall be able to explain and apply fundamental algorithms and techniques in the area of natural language processing. In particular, students will:

- understand approaches to syntax and semantics in NLP,
- understand approaches to summarization
- understand statistical approaches to machine translation,
- understand machine learning techniques used in NLP, including hidden Markov models, probabilistic context-free grammars, and the EM algorithm as applied within NLP,
- know how to apply standard natural language processing tools.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje: Študenti spoznajo področje obdelave naravnega jezika, poglobitne tipe jezikovnih virov, in moderne metode za analizo besedil in pridobivanje informacij iz njih.

Uporaba: Študenti znajo uporabiti predstavljene tehnike v okviru odprtokodnih orodij za obdelavo naravnega jezika.

Refleksija: Razumevanje primernosti različnih tehnik za posamezne naloge, njihovih prednosti in slabosti, razumevanje tehničnih omejitev in etičnih dilem.

Prenosljive spretnosti - niso vezane le na en

predmet: Reševanje in razumevanje kompleksnih problemov. Kritična presoja uporabe analitičnih tehnik. Vrednotenje podatkov, informacij in znanja. Raba analitičnih orodij in informacijsko komunikacijske tehnologije.

Knowledge and understanding:

Knowledge of main natural language processing techniques, sources and methods, knowledge of modern text analytics and knowledge extraction tools.

Application:

The use of the presented methods within open-source natural language processing tools.

Reflection:

Understanding the suitability of different text analytics techniques for specific problems, their strengths and weaknesses, understanding technical limitations and ethical dilemmas.

Transferable skills:

Understanding and solving complex problems. Critical reflection of different analytical techniques. Evaluation of data, information, and knowledge. Use of analytical tools and information technology.

Metode poučevanja in učenja:

Predavanja, laboratorijske vaje, delo v majhnih skupinah, javne predstavitev projektov

Learning and teaching methods:

Lectures, lab work, work in small groups, public presentations of projects.

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):	50%	Type (examination, oral, coursework, project):
Sprotno preverjanje (domače naloge, projektno delo, javne predstavitev)		Continuing (homework, project work, public presentations)
Končno preverjanje (pisni in ustni izpit) Pri obeh delih mora študent doseči vsaj polovico možnih točk.	50%	Final: (written and oral exam) In both parts students must get at least half of available points.
Ocene: 6-10 pozitivno, 5 negativno (v skladu s Statutom UL).		Grading: 6-10 pass, 5 fail (according to the rules of University of Ljubljana).

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Predmet temelji predvsem na postopkih računalniškega vida, ki predstavljajo izhodišče večine biometričnih sistemov. Ciljna skupina so študentje, ki jih zanimata visoko-tehnološki razvoj in raziskave, saj je veliko pristopov še v raziskovalni fazi. Glavna vsebina, ki se bo zaradi razvoja področja spremenjala:

- 14. Osnove biometrije
- 15. Biometrične modalnosti
- 16. Zgradba tipičnega biometričnega sistema
- 17. Razpoznavna/verifikacija/identifikacija
- 18. Metrike
- 19. Pogoji za korektno primerjanje sistemov (baze, ogrodja)
- 20. Uspešnost in uporabnost sistemov
- 21. Računalniški vid kot temelj biometričnih sistemov
-
- 22. Prstni odtis
 - a. Zajem
 - b. Ocena kvalitete slike in izboljšanje kvalitete
 - c. Procesiranje
 - d. Singularne točke, minutiae, grebeni
 - e. Ujemanje
-
- 23. Šarenica
 - a. Zajem
 - b. Izboljšanje kvalitete

Content (Syllabus outline):

The course relies mostly on computer vision, as most biometrics technologies are based on it. Students interested in cutting edge technology, much of which is still in a research stage, are the intended target for the course. The main content (will evolve due to developments in the field):

- 1. Biometry basics
- 2. Biometrical modalities
- 3. Structure of a typical biometric system
- 4. Recognition/verification/identification
- 5. Metrics
- 6. Conditions for correct comparisons of the systems (databases, frameworks)
- 7. Performance and usefulness of the systems
- 8. Computer vision as the foundation of the biometric systems
-
- 9. Fingerprint
 - a. Acquisition
 - b. Quality assessment and quality improvement
 - c. Processing
 - d. Singular points, minutiae, ridges
 - e. Matching
-
- 10. Iris
 - a. Acquisition
 - b. Quality improvement
 - c. Processing (segmentation, normalization, coding)

<p>c. Procesiranje (segmentacija, normalizacija, kodiranje)</p> <p>d. Značilke</p> <p>e. Ujemanje</p> <p>-----</p> <p>24. Obraz</p> <p>a. Zajem</p> <p>b. Podmodalnosti</p> <p>c. Procesiranje</p> <p>d. Značilke (pristop na osnovi izgleda, modela in/ali tekture)</p> <p>e. Ujemanje</p> <p>-----</p> <p>25. Gibanje</p> <p>a. Zajem</p> <p>b. Vpliv dinamike</p> <p>c. Key problems of modalities/systems (research challenges)</p> <p>The lectures introduce the approaches and explain their operation. At tutorial the knowledge is applied to practical problems in Matlab and open source tools.</p>
--	--

Temeljna literatura in viri / Readings:

4. Anil K. Jain, Arun A. Ross, Karthik Nandakumar, *Introduction to Biometrics*, Springer, 2011 (glavna, izhodiščna literatura / primary literature)
5. Ruud M. Bolle, Jonathan Connell, Sharath Pankanti, Nalini K. Ratha, Andrew W. Senior, *Guide to Biometrics*, 2003

Vsebine bodo podprte tudi s članki iz pomembnih konferenc in revij. /

Content will be backed also with articles from important conferences and journals.

Cilji in kompetence:**Cilji predmeta:**

- Študent dobi dober pregled nad področjem biometrije in tistimi področji računalniškega vida, ki tvorijo temelje biometričnih sistemov.
- Študent je seznanjen s potekom raziskovalnega dela.
- Študent pridobi dobro osnovo za doktorski študij.

Pridobljene kompetence študenta:

- Pozna terminologijo in principe analize identitete.
- Pozna obseg biometričnih tehnologij in njihove prednosti in slabosti.
- Pozna delovanje biometričnega sistema od zajema do odločitve.
- Razume potek procesiranja za vsako biometrično modalnost.
- Pozna nekatere omejitve delovanja biometričnih sistemov.
- Kritično razmišlja o starejših in novejših modalnostih, kako se modalnosti lahko dopolnjujejo.
- Pozna nekatere odprte probleme/izzive v biometriji.

Objectives and competences:**Objectives of the course:**

- Student gains good overview over the biometry and with it related computer vision methods that set foundations of biometric systems.
- Student gets acquainted with the flow of the research work.
- Student gets good foundation for doctoral study.

Gained student competences:

- Knows the terminology and principles of identity analysis.
- Knows the scope of the biometric technologies and their (dis)advantages.
- Knows how the system works from the acquisition to decision.
- Understands the processing flow for each biometric modality.
- Knows some limitations of biometric systems.
- Is able to critically consider older and newer modalities and how they can work together.
- Is familiar with some open problems/challenges in biometry.

Predvideni študijski rezultati:**Znanje in razumevanje:**

Poleg deklarativnega znanja o gradnikih, delovanju in evalvaciji biometričnih sistemov, študent razume delovanje pristopov računalniškega vida s praktičnega vidika.

Uporaba:

Študent pozna algoritme za vsako modalnost, pozna lastnosti modalnosti in zna uporabiti to znanje v visoko-tehnološkem razvojnem oz. raziskovalnem okolju.

Refleksija:

Študent razume primernost različnih pristopov za posamezne modalnosti, razume prednosti in slabosti pristopov in modalnosti ter dobi občutek dobrega zrcaljenja teoretičnih načel tehnologije v prakso.

Intended learning outcomes:**Knowledge and understanding:**

Beside declarative knowledge about structure, execution and evaluation of biometric systems, student understands computer vision approaches from the practical point of view.

Application:

Student knows algorithms for each modality, knows properties of the modalities, and knows how to apply that knowledge in cutting-edge research or development environment.

Reflection:

Student understands suitability of different approaches for different modalities, understands (dis)advantages of approaches and modalities, and sees the mirroring of theoretical principles into practice.

Prenosljive spretnosti – niso vezane le na en predmet:

Študentovo znanje metodološkega pristopa, pomena metrik, evalvacije in kritične presoje vhodnih podatkov, pristopov in rezultatov, pričakovanih rezultatov posameznih korakov algoritmov je uporabno na širšem področju reševanja in razumevanje visoko-tehnoloških R&R problemov.

Transferable skills:

The student knowledge about methodological approach, meaning of metrics, evaluation and critical judgement of input data, approaches and results, expected results of algorithms steps is usable in a wider context of solving and understanding cutting-edge R&D problems.

Metode poučevanja in učenja:

Predavanja in laboratorijske vaje, individualno delo na domačih nalogah/projektu, predstavitev izdelkov.

Learning and teaching methods:

Lectures and tutorial, individual work on assignments/project, presentations of outcomes.

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

<u>Način (pisni izpit, ustno izpraševanje, naloge, projekt):</u>		<u>Type (examination, oral, coursework, project):</u>
Sprotno preverjanje (domače naloge/projekt, predstavitev)	67%	Continuing (assignments/project, presentations)
Končno preverjanje (pisni ali ustni izpit)	33%	Final: (written or oral exam)
Ocene: 6-10 pozitivno, 5 negativno (v skladu s Statutom UL).		Grading: 6-10 pass, 5 fail (according to the rules of University of Ljubljana).

Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

- Uvod in zgodovinski pregled področja.
- Temelji zvoka in računalniške zvočne produkcije:
 - fizikalni (zvok in amplituda, frekvenca, hitrost, jakost, faza, interferenca, absorbcija);
 - matematični (Fourierova teorija, teorem o vzorčenju, konvolucija, korelacija, Gaborjev zvočni kvant, itd.);
 - fiziološki - psihoakustika (slušna percepциja in frekvenčni razpon, posredna percepциja prek drugih anatomskeih struktur, pomen harmonskih komponent zvoka, lokalizacija, maskiranje, kritični pasovi, učinki okolja, rezultati zadnjih raziskav nevro-znanosti na tem področju).
- Elektronski in omrežni vidiki procesiranja: analogni in digitalni signal, (kvantizacijski) šum, pasovna širina medija in naprave, ojačitev in slabjenje, analogno digitalna in digitalno analogna pretvorba, popačenja, filtriranje, mikrofoni.
- Generatorji zvoka: sintetizatorji, vzorčevalniki.
- Računalniško snemanje: zajem kodiranega zvoka (sekvencerji), zajem vzorčenega zvoka (direct-to-disc recording).
- Standardne studijske komponente: mešalniki, limiterji, kompresorji, reverberatorji, odstranjevalci šuma, korektorji višine, ekvilizatorji.
- Protokoli v zvočni produkciji: MIDI, IEC-60958 (AES / EBU), S/PDIF, AC-3, E-AC-3.
- Sinhronizacijski mehanizmi: MTC, SMPTE, integracija z video produkcijo in filmom.
- Programske standardi: vmesniki (VST / Steinberg, DirectX / MS), formati zapisov (Wav, MP3, Ogg).
- Sodobna zvočna reprodukcija (omrežni tokovniki, protokoli RTP, RTCP in RTSP).
- Profesionalna orodja (Steinberg, Roland, odprtokodne rešitve).
- Zaščita intelektualne lastnine.
- Zaključki.
- Addendum: Mini vložki s praktičnim delom, ki pokrivajo najnovejše trende ali specifične vidike, ki niso pokriti na vajah.

- Introduction and overview of the field.
- Basics of sound and computer based production:
 - physics (sound and amplitude, frequency, speed, power, phase, interference, absorption);
 - mathematics (Fourier theory, sampling theory, convolution, correlation, Gabor's acoustic quant, etc.);
 - physiology - psychoacoustics (aural perception and frequency range, indirect perception by various anatomical structures, the role of harmonics, localization, masking, critical bands, environmental effects, some latest neuroscience research results in this domain).
- Electronic and network principles of sound processing: analog and digital signal, (quantization) noise, medium / device bandwidth, amplification and attenuation, analog to digital, and digital to analog conversion, distortion, filtering, microphones and capturing signals.
- Sound generators: synthesizers, samplers.
- Computer based recording: capturing of coded sound (sequencers), capturing of sampled sound (direct-to-disc recording).
- Standard studio components: mixers, limiters, compressors, reverbs, noise reducers, pitch correction tools, equalizers.
- Protocols and algorithms in computer based production: MIDI, IEC-60958 (AES / EBU), S/PDIF, AC-3, E-AC-3.
- Synchronization mechanisms: MTC, SMPTE, video and movie integration.
- Programming standards: interfaces (VST / Steinberg, DirectX / MS), formats (wav, MP3, Ogg).
- Contemporary sound reproduction (network streaming, protocols RTP, RTCP, RTSP).
- Professional tools (Steinberg, Roland, open source solutions).
- Intellectual property protection.
- Comclusions.
- Addendum: Mini practical tasks covering the latest technological issues or specific issues not covered at laboratory works.

Temeljni literatura in viri / Readings:

- D. Trček: Računalniška zvočna produkcija, kopije prosojnic, FRI UL, 2016 / 2017.
- Loy G., Musimathics, The MIT Press, MIT, Cambridge, 2006.

Cilji in kompetence:

Cilj predmeta je, da študentje tehničnih in umetniških profилov pridobijo in osvojijo znanja na področju računalniške zvočne produkcije tako za čisto tehnično, kot tudi kreativno aplikacijo v produkcijskih okoljih.

Splošne kompetence:

- Sposobnost definiranja, razumevanja in reševanja kreativnih profesionalnih izzivov na področju računalništva in informatike.
- Sposobnost profesionalnega komuniciranja v materinem in tujem jeziku.
- Sposobnost razumevanja in uporabe znanja računalništva in informatike na drugih relevantnih področjih (ekonomija, organizacija, umetnost, itd.).

Predmetno specifične kompetence:

- Praktična znanja in sposobnosti na področju strojne in programske opreme ter informacijske tehnologije za uspešno profesionalno delo.

Objectives and competences:

The goal of the course is to educate students (with technological and fine-arts background) for using computers in sound production be it for purely technical, or creative application scenarios and production environments.

General competences:

- The ability to define, understand and solve creative professional challenges in computer and information science.
- The ability of professional communication in the native language as well as a foreign language.
- The ability to understand and apply computer and information science knowledge to other technical and relevant fields (economics, organisational science, fine arts, etc.).

Subject specific competences:

- Practical knowledge and skills of computer hardware, software and information technology necessary for successful professional work in computer and information science.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje principov računalniške zvočne produkcije in njihova sposobnost uporabe v produkcijskem (studijskem) okolju.

Uporaba: Aplikacija na tehničnih in umetniških področjih uporabe računalniške zvočne produkcije.

Intended learning outcomes:

Knowledge and understanding: Knowledge of the principles of computer based sound production and its implementation in production (studio) environments and artistic environments.

Application: Application in technical and creative (artistic) domains.

Refleksija: Celovito razumevanje zvoka in njegovega računalniškega procesiranja.
Prenosljive spremnosti - niso vezane le na en predmet: Predmet bo omogočil več-disciplinarno pridobivanje in obvladovanje znanja in sicer tako za tehnično kot umetniško usmerjene študente.

Reflection: Holistic understanding of sound and its processing in computer environments.
Transferable skills: The course will provide multi-disciplinary knowledge in the area of computer based sound production by covering technology and artistic (creative) elements.

Metode poučevanja in učenja:

Predavanja, vaje s projektnim delom (praktične prototipne implementacije), lastne predstavitev.
Udeležba na vajah je obvezna (zahtevan procent udeležbe se določi ob začetku študijskega leta).
Nosilec predmeta lahko določi obvezno udeležbo tudi na predavanjih.

Learning and teaching methods:

Lectures, laboratory work (with practical prototype implementations), students' presentations.
Attendance of laboratory work is mandatory (the exact percentage is announced at the beginning of a study year).
The lecturer may impose mandatory attendance of lectures.

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

50 % ocene predstavlja sprotno delo študenta v obliki preverjanj na vajah (domače naloge, kvizi, praktičen projekt), 50 % ocene pa predstavlja izpit, ki je načeloma v pisni obliki, lahko pa tudi v pisni in ustni obliku (pri čemer lahko nosilec namesto ustnega izpita uvede seminar). Za uspešno opravljene obveznosti pri predmetu morata biti pozitivni obe delni oceni. Pristop k pisnemu izpitu je možen le po uspešno opravljenih obveznostih pri vajah (in v primeru dodatnih zahtev, ki se nanašajo na predavanja, po izpolnitvi teh). Ocene: 6-10 pozitivno, 5 negativno (v skladu s Statutom UL).	50% 50%	50% of the final grade is obtained on the basis of on-going laboratory work (homeworks, quizzes, practical project implementations and presentations). The other 50% is obtained on the basis of a written exam, or written and oral exam (the lecturer may decide that a coursework replaces the oral exam). To be eligible for the written exam, a candidate must have successfully completed laboratory work, and fulfilled other obligations related to lecturing that the lecturer may have imposed. For successful completion of the course both grades have to be positive.
--	----------------	---

		Grading: 6-10 pass, 5 fail (according to the rules of University of Ljubljana).

Prerequisites:

Vsebina:

Content (Syllabus outline):

Predmet vsebuje različne napredne teme s področja zaznavanja gibanja z metodami računalniškega vida. Konkretna vsebina se bo letno prilagajala trendom na tem hitro razvijajočem se področju. Trenutne aktualne teme obsegajo:

1. Pregled področja ocenjevanja gibanja in aplikacije.
2. Ocenjevanje optičnega toka z metodami najmanjših kvadratov.
3. Ocenjevanje optičnega toka z variacijskim računom.
4. Sledenje s parametrično predlogo po postopku Lucas-Kanade.

The course will include selected advanced topics in motion perception using computer vision. Concrete topics will change each year according to trends in this fast developing field.

in computer science and industry. Potential topics will include:

1. Overview of the field motion estimation and applications.
2. Optical flow estimation using least-squares.
3. Variational optical flow estimation.
4. Parametric template tracking using Lucas-Kanade.
5. Histogram-based tracking using Mean Shift

<ul style="list-style-type: none"> 5. Sledenje s histogrami po postopku srednjega prenika (Mean Shift). 6. Sledenje s stohastično optimizacijo po postopku križne entropije. 7. Rekurzivni Bayesovi filtri za sprotno ocenjevanje stanj. 8. Sledenje s Kalmanovim filtrom. 9. Sledenje s filtri z delci. 10. Sledenje deformabilnih objektov s konstelacijskimi modeli. 11. Metodologije primerjave sledilnikov. 12. Sledenje s klasifikacijo. 13. Metode dolgoročnega sledenja z detekcijo. 	<ul style="list-style-type: none"> 6. Tracking as stochastic optimization using cross entropy. 7. Recursive Bayes filter for online state estimation. 8. Tracking by Kalman filter. 9. Tracking by particle filters. 10. Tracking deformable objects by constellation models. 11. Methodologies of tracker comparison. 12. Tracking by classification. 13. Long-term tracking by detection.

2. Richard Szeliski, Computer Vision: Algorithms and Applications, Springer, 2010
3. David Barber, Bayesian Reasoning and Machine Learning, Cambridge University Press, 2012

Cilji in kompetence:

Primarni namen predmeta je seznanitev z raziskovalno zahtevnim področjem, ki je del računalniškega vida, širše pa umetne inteligence. V tem smislu je snov logično nadaljevanje prvostopenjskih predmetov umetne inteligence, specifično osnovnih tem s področja računalniškega vida, multimedije in strojnega učenja. Sekundarni namen predmeta je osvojitev uporabe analitičnih in numeričnih metod, s katerimi se študentje že spoznajo pri bazičnih predmetih, vendar jih pogosto ne uporabijo v praksi. Študentje bodo ob koncu predmeta seznanjeni z modernimi metodami ocenjevanja gibanja in sledenja z metodami računalniškega vida ter imeli praktične izkušnje iz implementacije teh metod.

Objectives and competences:

The primary objective is obtaining an overview of scientifically challenging topics of computer vision and broader artificial intelligence. In this sense, the course is logical continuation of basic first-level courses in artificial intelligence, specifically, computer vision, multimedia and machine learning. The secondary objective is practical application of analytical and numerical methods that students learn at basic courses, but seldom use in practice. At the end of this course the students will be skilled in modern approaches for motion estimation and tracking using computer vision approaches. The students will obtain practical experience with these approaches.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje: Študent bo poznal in zнал uporabljati različne moderne pristope za ocenjevanje, zaznavo gibanja in sledenje s postopki računalniškega vida.

Uporaba: Predmet bo študentom predstavil znanstveno zahtevno področje zaznavanja gibanja z računalniškim vidom. V obsegu predmeta bodo študentje spoznali teoretične pristope, ki so osnova za nadaljne delo z naprednimi metodami v računalniškem vidu. Prav tako bodo dobili praktične izkušnje z implementacijami in analizo glavnih pristopov, ki so uporabljeni v mnogih modernih visokotehnoloških aplikacijah.

Refleksija: Poleg konkretnih znanj bodo študenti dobili tudi teoretičen pregled nad različnimi pristopi ocenjevanja gibanja, kar jim bo omogočilo boljše izhodišče za tako znanstveno kot aplikativno delo na področju računalniškega vida.

Prenosljive spremnosti - niso vezane le na en

predmet: Mnoge metode, ki jih bodo študentje spoznali in implementirali, so uporabne tudi pri ostalih področjih inženirstva in procesiranja kompleksnih signalov.

Knowledge and understanding: The student will understand and be able to apply different approaches to motion perception, estimation and tracking using computer vision.

Application: The course will present scientifically challenging and fast developing area of motion perception using computer vision. Students will learn theoretical approaches, which are basis for research and applications in advanced topics of computer vision. The students will also obtain practical experience by implementing and analyzing the main approaches that are used in many modern high-tech applications.

Reflection: Besides the practical knowledge, the students will gain theoretical insights into motion perception. By this, they will gain a solid ground for scientific as well as applicative work in the field of computer vision.

Transferable skills: Many of the approaches that students will learn and implement during the course are useful in other fields of engineering and processing of complex signals.

Metode poučevanja in učenja:

Predavanja, laboratorijske vaje, domače naloge in projektna naloga v sklopu vaj. Poseben poudarek je na individualnem delu študentov.

Learning and teaching methods:

Lectures, laboratory exercises, homeworks and project work. Special emphasis will be given on individual work.

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt): Sprotno preverjanje (laboratorijske vaje, domače naloge, projektna naloga) Končno preverjanje (pisni in ustni izpit) Ocene: 6-10 pozitivno, 5 negativno (v skladu s Statutom UL).	50% (30%,20%)	Type (examination, oral, coursework, project): Continuing (lab exercises, homework, project) Final (written and oral exam) Grading: 6-10 pass, 5 fail (according to the rules of University of Ljubljana).

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
--	-----------------------

**Vsebina:**

Poglavlja predavanj:

1. Zgradba omrežnega priključka (senzorja)
2. Arhitektura senzorskega omrežja
3. Fizični nivo
4. Poimenovanje in naslavljjanje
5. Časovna sinhronizacija
6. Določanje pozicije v prostoru
7. Topologija omrežja
8. Usmerjevalni protokoli
9. Podatkovno in vsebinsko usmerjena omrežja
10. Transportni protokoli

Content (Syllabus outline):

Basic topics:

1. Single – node architecture
2. Network architecture
3. Physical layer
4. Naming and addressing
5. Time synchronization
6. Localization and positioning
7. Network topology
8. Routing protocols
9. Data centric and content – based networks
10. Transport layer

Temeljni literatura in viri / Readings:

1. Holger Karl, Andreas Willig, "Protocols and Architectures for Wireless Sensor Networks", Wiley, 2005, ISBN: 978-0-470-09510-2
2. Shashi Phoha, Thomas F. La Porta, Christopher Griffin, "Sensor Network Operations" Wiley-IEEE Press, 2006, ISBN: 978-0-471-71976-2

Cilji in kompetence:

Cilj predmeta je študentom računalništva in informatike predstaviti senzorska omrežja. Poudarek je na posebnostih senzorskih omrežij, ki se od običajnih razlikujejo po omejeni moči procesorja ter omejeni energiji za napajanje.

Objectives and competences:

The goal of this course is to gain the main knowledge about wireless sensor networks with their special properties (different processing and power capabilities).

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje različnih senzorskih omrežij in njihovih posebnosti.
Razumevanje delovanja senzorskih omrežij
Uporaba: Uporaba senzorskih omrežij pri raznih pogojih uporabe (v industriji, pri zajemanju podatkov na širokem področju, v domu, ...).

Intended learning outcomes:

Knowledge and understanding: Knowledge in sensor networks and their peculiarities.
Understanding of the fundamental concepts of sensor networks.
Application: Use of sensor networks in various scenarios (industry, general data acquisition, intelligent home,...).

Refleksija: Spoznavanje in razumevanje ugašenosti med teorijo in njenom aplikacijo na konkretnih primerih s področja senzorskih omrežij.

Prenosljive spretnosti - niso vezane le na en predmet: Reševanje drugih konceptualno sorodnih problemov s področja komunikacije in zajemanja podatkov.

Reflection: Learning and understanding the correlation between theory and its application to specific scenarios of sensor network use.

Transferable skills: Solving other conceptually related problems from the fields of communication and data acquisition.

Metode poučevanja in učenja:

Predavanja, računske vaje z ustnimi nastopi.
Poseben poudarek je na sprotinem študiju in na laboratorijskem delu pri vajah.

Learning and teaching methods:

Lectures, numerical exercises and oral presentations. Special attention is given to active study and laboratory work.

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Način (pisni izpit, ustno izpraševanje, naloge, projekt):		Type (examination, oral, coursework, project):

Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:

Prerequisites:

Vsebina:

Na uvodnih predavanjih študentom pojasnimo cilje predmeta in kako jih lahko dosežemo. Med aktivnosti, ki jih lahko štejemo kot obveznosti pri predmetu sodijo vodenje računalniškega (ali po strokovni tematiki sorodnega) krožka na osnovni ali srednji šoli, vodenje študijske skupine na fakulteti, redno obiskovanje izven kurikularnih strokovnih predavanj na fakulteti ali na drugih članicah UL, ki so povezana s predmetom ipd.

Content (Syllabus outline):

After an introductory lecture on the necessary background of the activities involved in the course, the students' activities include classes on topics in computer and information science and lab work with students of elementary and high schools, organizing study groups of students at the 1st degree level, attending extracurricular lectures at the University of Ljubljana on subjects associated to the topics of the course.

Temeljni literatura in viri / Readings:

1. **Keller Gustav, Binder Annette, Thiel Rolf Dietmar** (1999). Boljša motivacija uspešnejše učenje (translated from German); Trening učnih navad. Ljubljana: Center za psihodiagnostična sredstva.
2. **Bratanič, Marija** (1990), Mikropedagogija, interakcijsko-komunikacijski aspekt odgoja, Školska knjiga, Zagreb

Cilji in kompetence:

Cilj predmeta je študentom je omogočiti in s kreditnimi točkami ovrednotiti njihovo izven kurikularno strokovno, nepridobitno delo, ki je za profesionalno profiliranje strokovnjaka na področju računalništva in informatike potrebno, pa ga učni načrt sicer ne pokriva.

Splošne kompetence:

- Sposobnost strokovnega sporazumevanja v domačem in v tujem jeziku

Objectives and competences:

The object of this course is to provide a framework for awarding study credits for extracurricular non-profit activities of students related to computer and information science, providing useful experience for experts in this field that are not included in the curriculum of the study program.

General competences:

- The ability of professional communication in the native language as well as a foreign language

- Sposobnost skupinskega dela v strokovnem okolju, vodenje manjše strokovne skupine
- Sposobnost administrativnega vodenja procesov, povezanih z raziskovanjem, industrijo, izobraževanjem in drugimi področji
- Sposobnost prenašanja znanja in pisanja v domačem in tujem jeziku

Predmetno specifične kompetence:

- Sposobnost celovite obdelave manjših projektov in reševanja problemov iz prakse s področja računalništva in informatike.
- Naučiti se izbrati primerno orodje in tehnologijo za reševanje konkretnega problema
- Razvijati sposobnosti za posredovanje znanja in popularizacijo računalniških znanj in veščin.
- Sodelovanje pri skupinskem reševanju problemov, vodenja manjše skupine, pripravo gradiv, ki so za vodenje take skupine potrebna, organizacijo in pridobivanje znanj, ki so potrebni za delo skupine, pripravo terminskega in vsebinskega načrta za delo skupine itd.

- The ability of teamwork within the professional environment; management of a small professional team
- The ability for administrative management of processes related to research, industry, education and other fields
- The ability of knowledge transfer and writing skills in the native language as well as a foreign language.

Subject specific competences:

- Completing smaller practical projects and solve problems in the fields for computer and information science
- Obtaining the knowhow to choose the suitable tools and technologies for a specific problem
- Developing teaching skills and means for popularizing computer and information science topics and issues.
- Participating in group solutions, organizing and supervising the work of a smaller group including the preparation of the necessary materials, planning group work, etc.

Predvideni študijski rezultati:

Znanje in razumevanje:

Spoznavanje osnovnih zakonitosti pri posredovanju znanja in popularizaciji računalniškega področja manjši skupini predvsem mlajših članov, organizaciji njenega dela in razumevanje pomena in uporabe takih znanj pri strokovnem delu strokovnjaka na področju računalništva in informatike.

Intended learning outcomes:

Knowledge and understanding:

Basic educational principles and teaching practice in the process of introducing computer science topics to smaller groups of younger students, organization of group work, understanding the role of such competencies in the work of an expert in the field of computer and information science.

Metode poučevanja in učenja:

Learning and teaching methods:

Predavanja, mentorski in seminarski način dela ter spremljanja dela študenta, z ustnim nastopom ob zaključku semestra. Poseben poudarek je na skupinskem delu pri seminarjih.	Lectures, individual work with students, seminars with oral presentations with special emphasis on group work.

Metode poučevanja in učenja:

Learning and teaching methods:

Predavanja, mentorski in seminarski način dela ter spremljanja dela študenta, z ustnim nastopom ob zaključku semestra. Poseben poudarek je na skupinskem delu pri seminarjih.	Lectures, individual work with students, seminars with oral presentations with special emphasis on group work.
---	--

Delež (v %) /

Načini ocenjevanja:	Weight (in %)	Assessment:
Način (pisni izpit, ustno izpraševanje, naloge, projekt):		Type (examination, oral, coursework, project):
Način (pisni izpit, ustno izpraševanje, naloge, projekt):	50%	Type (examination, oral, coursework, project):
Sprotno preverjanje (domače naloge, kolokviji in projektno delo)	50%	Continuing (homework, midterm exams, project work)
Končno preverjanje (pisni in ustni izpit)		Final (written and oral exam)
Ocene: opravil z odliko, opravil ali ni opravil (v skladu s Statutom UL).		Grading: passed with excellence, passed or failed (according to the Statute of UL).
